## INTRODUCTION

In 1935 the Bureau of Dairy Industry and the State dairy extension services inaugurated the Nation-wide Dairy-Herd-Improvement Association proved-sire program. The purpose of this program is to "prove" as fully as possible the breeding value of all sires used in dairy-herd-improvement-association herds and to make the information available in such a way that it will be of the greatest benefit to the owners of the sires as well as to the dairy industry as a whole.

The present publication is the fifteenth annual list of proved sires issued by the Department of Agriculture since the program was begun. It contains the names and summarized "proved-sire" records of 2,817 sires whose records were tabulated by the Bureau of Dairy Industry between January 1, 1950, and January 1, 1951. Copies of the 14 previous lists [1] may be consulted in most agricultural college libraries, and copies of some are still available by purchase.

## PURPOSE OF THE LIST

Knowledge of a sire's breeding value is of particular importance to the owner of the sire or of the herd in which the sire has been used. Therefore, all information on each proved sire is sent to the owner of the sire as rapidly as the data accumulate and are tabulated. Often, however, the information will also be of interest and value to other dairymen, especially those whose herds carry related blood lines. Bringing together all proved-sire information annually, as is done in these lists, is expected not only to be currently useful to all dairymen in selecting promising herd sires but also to assist materially in spreading and perpetuating the influence of the outstanding sires.

Although these lists emphasize the use of proved sires to improve dairy herds, the importance of using dams of proved transmitting ability is not minimized. The sire and dam contribute equally to the inheritance of the progeny. In a broad dairy-cattle-improvement program, however, the sire is the most potent factor for improving the producing capacity of our dairy cattle. The influence of the sire can be widely dispersed since the sire may have great numbers of progeny each year; whereas, the dam will have only a few progeny during her entire lifetime. Aside from the proved sire, the best prospect for improving production in dairy cattle is through the use of the sons of proved parents.

## MEANING OF THE TERM "PROVED SIRE"

In dairy-herd-improvement-association work a sire is termed a proved sire when the production records of at least five of his unselected daughters have been compared with the production records of their dams. Such comparisons may show that a sire has transmitted high-, medium-, or low-producing ability to his daughters. To say that a sire is a proved sire, therefore, does not necessarily mean that the sire is a valuable sire; it merely means that the production records of five or more of his unselected daughters and their dams have been compared on a uniform basis.

## KIND OF RECORDS USED IN DAM-AND-DAUGHTER COMPARISONS

All proved-sire records in this list were tabulated under the rules of the dairy-herd-improvement association proved-sire program. Under the rules of this program, all production records of daughters and dams used in the tabulation consist of the first 305 days' production of the lactation period. Records of cows under 6 or over 7 years of age are converted to a 6-year-old basis by using age-conversion factors developed by the Division of Dairy Herd Improvement Investigations, from records of association cows. Records of cows milked three or four times a day during any part of the 305-day lactation period are reduced to a twice-a-day milking basis, by using factors based on the fact that cows milked three times daily or four times daily produce approximately 20 percent or 35 percent more milk, respectively, than if they had been milked only twice daily. When more than one lacta-

Handbook 7, price 60 cents. All of these publications that are still available may be purchased from the Superintendent of Documents, Washington 25, D. C.

tion record is available, each record is standardized according to the foregoing procedure and the average of all the standardized records is used to represent the producing capacity of the cow.

### THE PROVED-SIRE RECORDS

The sires are listed by breeds in alphabetical order, except that sires registered with the American Dairy Cattle Club are listed on page 200. The sires are also listed by registration number on pages 201 to 218, inclusive.

The information given for each sire may be better understood by studying the following proved-sire record:

| | Number | Number | Lb. | % | Lb. |
|---|---|---|---|---|---|
| MONOLO SYBIL POMPEY 435238*14---------- | 15 daughters | 38 | 9,894 | 5.3 | 528 |
| Born, 8-27-41; proved, 5-9-50; alive ; Fla. | 10 daughters | 22 | 10,072 | 5.3 | 534 |
| Sire, 347038; dam, 1165717. | 10 dams---- | 21 | 8,415 | 5.5 | 464 |
| Used in Southeastern A. B. A., N. C. | Difference-- | (9-3-9) | +1,657 | -.2 | +70 |

The Jersey sire Monolo Sybil Pompey 435238, as indicated in the second line, was born August 27, 1941, and was proved May 9, 1950. He was alive when proved. In some records a blank space follows the date of proving, which indicates no report was made as to whether or not the sire was alive or dead at the time of proving. The sire was proved with records from Florida. The third line gives the registration numbers of the sire and dam of the proved sire.

The last line usually lists the owner of the herd in which the sire was proved. In case records from more than one herd were used, the reference is to the owner of the herd from which production records for the largest number of the sire's youngest daughters were reported. If the sire is reported as used in an artificial-breeding association, the name of the association is given in place of the herd owner. This sire was used in the Southeastern Artificial Breeding Association, North Carolina.

An asterisk following the registration number of a sire indicates that he appeared in a previous list and that his record has been retabulated to correct it or to include additional data that have since become available. The figure following the asterisk indicates in which of the 14 previous lists his record appeared. The figure 1 indicates the first list (Miscellaneous Publication 277), 2 the second list (Miscellaneous Publication 315), and so on. (See footnote 1, p. 1.) In the example above the asterisk and figure 14 (*14) following the registration number indicate that data on the sire appeared in the fourteenth list (Agriculture Handbook No. 7).

Figures at the right show that the sire had 15 daughters with a total of 38 production records averaging 9,894 pounds of milk, testing 5.3 percent fat, and averaging 528 pounds of butterfat; that 10 of these daughters had 22 production records averaging 10,072 pounds of milk, testing 5.3 percent fat, and averaging 534 pounds of butterfat; and that the 10 dams of these daughters had 21 production records averaging 8,415 pounds of milk, testing 5.5 percent fat, and averaging 464 pounds of butterfat. A plus (+) or minus (−) sign indicates whether the average production of the daughters is above or below that of the dams.

The three figures in parentheses (9–3–9) following the word "Difference" give a brief comparison of the daughters with their respective dams. The first figure is the number of daughters that equaled or excelled their dams in milk production, the second figure the number of daughters that equaled or excelled in butterfat test, and the third figure the number of daughters that equaled or excelled in butterfat production.

### USING THE PROVED-SIRE RECORD

The proved-sire record as summarized in this list should be considered merely as an indication and not as conclusive evidence of the breeding value of the sire in question. In general, however, the greater the number of dam-and-daughter comparisons included in a proved-sire record the more reliable the record as an indication of the breeding value of the sire. Also the greater the number of lactation records included in the average record of each dam and daughter the more dependable the proved-sire record.

If the difference between the average butterfat production of the dams and that of the daughters is less than 25 pounds, the increase or decrease should not be considered as significant. If the daughters of a sire have an average butterfat production of 25 or more pounds above that of their dams the sire may be considered as raising the production of the herd in which he is used. If the daughters' average butterfat production is 25 pounds or more below that of their dams the sire may be considered as lowering the production of the herd in which he is used, in which case he should be discarded from that particular herd. Such a sire may prove useful in a herd of lower-producing dams, however.

To make the most intelligent selection of a sire, the dairyman should use these proved-sire records to single out the most promising sire and then make every effort to supplement these data with additional information gathered from the herds in which the dams and daughters made their records. Particular attention should be given to the feeding practices and environmental conditions under which the records were made, in order to be assured that the records of the daughters were not made under more favorable conditions than those of the dams or vice versa. It is especially important to determine that there has been no selection of daughters in making the comparison.

A dairyman who wishes more information about a listed sire than is contained in the brief summary may write the herd owner listed. Or he may address his request to the extension dairyman of the State in which the sire was proved; or, if the sire is reported as used in an artificial-breeding association, he may write to the extension dairyman of the State in which the breeding association is located. He should address his letter as follows: State Extension Dairyman, In Charge of Dairy-Herd-Improvement-Association Work. An address list is given on page 6.

### SONS OF PROVED SIRES

Although many of the sires listed were dead when proved, they may have living sons available for breeding purposes. Information concerning sons of proved sires can be obtained from the State extension dairyman in charge of dairy-herd-improvement-association work in the State in which the sire was proved. The identification numbers of all recorded sons are included in the proved-sire record on

file in each State office. It has been demonstrated that sons of good proved sires, that is, sires that have transmitted high-producing capacity to a large percentage of their daughters, can be used with greater assurance of success than sons of sires that have not been proved. Further assurance of success with sons of proved sires is indicated if the sons are out of high-producing dams and if they have high-producing full sisters.

TABLE 1.—*Number of proved sires listed by States and breeds*

| State | Breed | | | | | | | | Total [1] |
|---|---|---|---|---|---|---|---|---|---|
| | Ayrshire [1] | Brown Swiss [1] | Guernsey [1] | Holstein [1] | Jersey [1] | Red Dane | Short horn [1] | American [1] | |
| Alabama | | | | | 7 | | | | 7 |
| Arizona | | 1 | | 6 | | | | | 7 |
| California | 2 | 1 | 7 | 26 | 11 | | | | 47 |
| Colorado | 2 | 3 | 2 | 11 | 3 | | | | 21 |

| New Jersey | 1 | 9 | 20 | 22 | 10 | | 1 | | 63 |
| New Mexico | | | 1 | 6 | | | | | 7 |
| New York | 60 | 22 | 53 | 193 | 42 | | 2 | 33 | 373 |
| North Carolina | 5 | | 12 | 8 | 4 | | | | 29 |
| North Dakota | | | 1 | 1 | | | | | 2 |
| Ohio | 26 | 15 | 25 | 45 | 34 | | 4 | 1 | 149 |
| Oklahoma | 1 | | | 4 | | | 1 | | 6 |
| Oregon | 1 | 6 | 11 | 6 | 32 | | | | 56 |
| Pennsylvania | 39 | 17 | 136 | 138 | 51 | | 2 | 4 | 383 |
| Rhode Island | 3 | 1 | 2 | 1 | 1 | | | | 8 |
| South Carolina | | 4 | | | | | | | 4 |
| South Dakota | 1 | 3 | | 2 | 1 | | | | 7 |
| Tennessee | | | 4 | 5 | 15 | | | | 24 |
| Texas | 2 | 1 | | 7 | 4 | | | | 14 |
| Utah | | | 4 | 6 | 4 | | 1 | | 15 |
| Vermont | 26 | 5 | 19 | 41 | 45 | | 1 | | 137 |
| Virginia | 1 | | 51 | 34 | 15 | | 2 | | 103 |
| Washington | | 5 | 21 | 20 | 52 | | 1 | | 99 |
| West Virginia | 9 | | 9 | 9 | 15 | | | | 42 |
| Wisconsin | 2 | 47 | 128 | 231 | 22 | | 5 | 5 | 435 |
| Wyoming | | | | 1 | | | | | 1 |
| Total [2] | 202 | 204 | 691 | 1,230 | 453 | 3 | 32 | [3] 41 | 2,817 |

[1] The number listed for each State frequently includes 1 or more sires proved with records from some other State as well as from the State indicated.
[2] The totals given here omit duplication of sires.
[3] 39 of the American Dairy Cattle Club sires are also registered in other breed associations.

## ADDRESSES OF STATE EXTENSION DAIRYMEN IN CHARGE OF DAIRY-HERD-IMPROVEMENT-ASSOCIATION WORK
