P R E F A C E

This publication summarizes available data on marketing California fresh market celery during the 1980 season. Data are included on shipments, shipping point prices, unload distribution, wholesale market prices, acreage, production, and crop value. These statistical records reflect the supply and demand factors that affected the marketing of the 1980 celery crop grown in California.

Data were compiled from various printed reports furnished by the Federal-State Market News Service; Agricultural Marketing Service, Economics and Statistics Service and Crop Reporting Board of the USDA; and the California Crop and Livestock Reporting Service. We wish to acknowledge and thank these agencies for the data and information furnished by them used to complete this publication.

Price quotations shown in this summary reflect the shipping point and wholesale market prices charged by the primary shippers and receivers in the major markets for the principal packs, varieties, grades and sizes of celery grown and shipped from California. Price ranges shown are for stock of generally good quality and condition. This price range is for the majority of sales as printed in Market News reports. Price quotations shown as some, a few or occasional were omitted from this summary to avoid extreme high or low ranges for small volume sales or discount sales.

Preparation of this summary was made by personnel of the Federal-State Market News Service and includes contributions by James Valladares at Los Angeles, Arthur Verissimo and Linnis Edwards at Salinas and Melvin A. Ries at Sacramento.

Additional copies of this summary may be obtained from the following offices:

## MARKETING CALIFORNIA CELERY

## Summary of the 1980 Season

Celery production in California set a new record in 1980. Out of the total state-wide production of 1.193 billion pounds, 96% of the crop was utilized in fresh market channels. The volume of fresh market shipments also reached a record high. This marks the second year that fresh market volume has increased since the last record high volume year was recorded in 1977.

California origin shipments accounted for 69.4% of the total available supply of fresh market celery shipped to U.S. markets in 1980. Recorded shipments from Florida totaled 23.2% while Michigan accounted for 4.8% of the total domestic supply. The remaining 2.6% came from production of other states such as New York, Ohio, Texas or Washington.

The 1980 shipping point price average rose modestly. The winter quarter average price was strongly depressed, compared to last year despite lower production in Southern California. Increased production during the spring and summer quarters had the effect of pushing seasonal prices downward.

However, the situation during the fall quarter was just the reverse as the seasonal average price was up sharply, averaging 47% over a year earlier for celery from Southern California shipping districts.

Total rail and truck unloads of California celery at major U.S. and Canadian cities increased for the second year in a row to a record high level of 707 million pounds. The breakdown by regions with 1979 data in parenthesis is as follows: eastern markets 23% (23); midwestern 22% (20); southern region 12% (11); western cities 34% (37) and Canada 9% (9).

The Chicago market increased useage of California celery by 47% in 1980 over the previous year, while in the southern region the major cities in Texas all showed significant increases in celery unloads

from California. In the western region of Los Angeles, Salt Lake City, and Portland, all showed significant declines in unload volume.

While trucks were the dominant mode of transportation to market, accounting for 87.4% of the total volume shipped from California, piggyback van shipments to eastern markets almost tripled (285% increase) over the volume shipped by the method in 1979.

The 108 million pounds shipped by mechanically refrigerated rail cars in 1980 was only up slightly (9%) over the volume shipped by rail in 1979.

1980 HIGHLIGHTS COMPARED WITH 1979

## Harvested Acreage in California:

Winter	-	4,500 acres	vs	4,900	, down	8%
Spring	-	5,350 acres	vs	5,000	, up	7%
Summer	-	4,000 acres	vs	4,000	, no change	
Fall	-	7,100 acres	vs	7,200	, down	1%
Total	-	20,950 acres	vs	21,100	, down	1%

## Yield Per Acre:

Winter	-	565 cwt.	vs	540	, up	5%
Spring	-	554 cwt.	vs	537	, up	3%
Summer	-	595 cwt.	vs	540	, up	10%
Fall	-	570 cwt.	vs	555	, up	3%
Average	-	570 cwt.	vs	544	, up	5%

## Production: Fresh Market and Processing

Winter	-	2,543,000 cwt.	vs	2,646,000	, down	4%
Spring	-	2,965,000 cwt.	vs	2,684,000	, up	10%
Summer	-	2,380,000 cwt.	vs	2,160,000	, up	10%
Fall	-	4,050,000 cwt.	vs	3,998,000	, up	1%
Total	-	11,938,000 cwt.	vs	11,488,000	, up	4%

## Seasonal and Average Annual Price Per Cwt.:

Winter	-	\$ 7.59	vs	\$ 9.54	, down	20%
Spring	-	\$ 9.12	vs	\$10.25	, down	11%
Summer	-	\$ 6.42	vs	\$ 6.34	, up	1%
Fall	-	\$10.53	vs	\$ 7.16	, up	47%
Average	-	\$ 8.73	vs	\$ 8.28	, up	5%

## California Crop Value (1,000 dollars):

Winter	-	\$ 19,297	vs	\$25,243	, down	23%
Spring	-	\$ 27,036	vs	\$27,520	, down	2%
Summer	-	\$ 15,277	vs	\$13,684	, up	12%
Fall	-	\$ 42,654	vs	\$28,622	, up	49%
Total	-	\$104,264	vs	\$95,069	, up	10%

## Fresh Market Shipments, California Origin:

114,534 units vs 106,414, up 8%

## Unloads in 41 U.S. and 5 Canadian Cities,

California Origin - 70,770 units vs 65,639, up 8%

## Imports into U.S.:

Canadian - 481 units vs 480, no change

## Largest Market for California Celery:

Los Angeles	-	13,150 units	vs	13,429	, down	2%
N.Y.-Newark	-	5,960 units	vs	5,400	, up	10%
Chicago	-	4,510 units	vs	3,058	, up	47%
Boston	-	4,290 units	vs	3,979	, up	8%
S.F.-Oak.	-	3,900 units	vs	3,843	, up	1%

Note: One unit equals 10,000 pounds.

GROWING AND HARVESTING CONDITIONS

Heavy rains during the winter quarter caused local flooding, slowed cutting, and disrupted harvest. These rains were beneficial in leaching salts from the soil in the South Coast districts. But the prolonged wet weather, caused by a long series of tropical storms that continued into March, halted field preparation and planting in all coastal districts. Harvest crews remained active between rains, but cutting was very slow due to muddy fields. Some acreage was bypassed in order to harvest better quality fields.

Harvest was complete in San Diego County the first week in April. Harvest slowed in Orange and Ventura Counties after mid-April as many growers had production gaps. Shipping quality also declined as a result of the earlier waterlogged field conditions.

Cutting began in the Santa Maria area after mid-May. After mid-June harvest decreased sharply from the South Coast as most growers finished for the season. Central Coast growers increased harvest sharply to fill the demand.

Light rains over the July 4th holiday period stopped harvest in the central part of the state. Damage to the crop was minimal. During July and August shippers curtailed cutting due to depressed market conditions. Quality was generally good during the summer quarter.

During September planting was active in Ventura, Dan Diego, and Orange Counties. Direct seeding was completed in the central coast districts, and transplanting continued through October. Acreage abandonment was heavy in the Salinas-Watsonville and Santa Maria-Oceano areas due to depressed market conditions as well as uneven stands and rust.

Light harvest was started in Orange County in early November as the peak harvest was reached along the central coast. By the end of November harvest decreased sharply in the Salinas-Watsonville areas as many shippers finished for the season.

During December, the normally heavy harvest from the South Coast was interrupted due to planting gaps and slow growth due to cold weather.

SALINAS-WATSONVILLE DISTRICT

HIGHLIGHTS: Overall movement decreased. F.o.b. prices were low most of July, August, September and first half of October but were high November and December. Harvest started June 9, three days later than last season.

A total of 5,986,000 crates and cartons of celery were shipped in 1980, down 3% from 1979's 6,192,000.

Shipments by mechanical rail car totaled 754,000 crates and cartons, 20% fewer than last year's 944,000.

Shipments by rail-truck totaled 314,000 crates and cartons, up 173% from 1979's 115,000.

Overall rail movement totaled 1,068,000 crates and cartons, 1% more than the previous year's 1,059,000. Rail shipments accounted for 18% of total movement, compared with 17% last year.

Shipments by truck totaled 4,918,000 crates and cartons, 4% less than 1979's 5,133,000. Truck shipments accounted for 82% of total movement, compared with 83% a year ago.

Shipments peaked the week of November 9-15 when 468,000 crates and cartons were shipped from the district via rail and truck. Rail shipments peaked November 17 when almost 31,000 crates and cartons were loaded on 18 mechanical rail cars and 7 rail-truck vans. Truck shipments peaked November 17 with 76,000 crates and cartons reported.

F.o.b. prices were reported from June 23 through December 19. F.o.b. "mostly" prices for 2½ dozen ranged from a low of \$3.00-3.50 August 5 to a high of \$10.00-12.00 December 18-19.

Prices were at near-lows the latter part of July, the first half of August and the first half of October.

Prices were at near-highs during December.

The 1979 season range was \$3.00-10.00.

SANTA MARIA-GUADALUPE-OCEANO-LOMPOC DISTRICT

The Santa Maria-Guadalupe-Oceano-Lompoc District shipped a total of 3,036,000 crates and cartons (including 80,000 shipped from Kern County) during 1980, 18% more than last year's 2,481,000.

Shipments by rail (including 15 rail-truck vans) totaled 299,000 crates and cartons, 19% more than the 241,000 shipped the year before. Shipments by rail accounted for 10% of total movement, the same as last year.

Shipments by truck totaled 2,737,000 crates and cartons, an increase of 18% above 1979's 2,240,000.

The peak week was November 9-15 when 166,000 crates and cartons were shipped by truck and rail. Highest truck day was November 13 with 30,000 crates and cartons. Highest rail day was November 5 with 5 cars reported.

Harvesting started May 19, around the same time as last year.

F.o.b. prices were reported from June 16 through December 5. Opening demand for 2½ dozen in crates and cartons was very good. At the start, prices were quoted at \$8.00. Demand turned very light and prices lowered to \$4.00.

Demand through July until mid-August was very light with some harvesting curtailed account of market conditions. The price level dropped down to \$3.00-\$3.50. During late August, demand improved slightly and prices moved up to \$4.50.

In September, demand again was very light and harvesting was curtailed. Prices ranged \$3.50-4.00 at the end of the month.

During the first part of October, demand remained very light. Prices edged downward to \$3.50. By mid-October, demand turned good and prices advanced to \$6.50-\$7.00. Demand remained good through November and the first week of December. The final quote for 2½ dozen was \$10.00.

Compiled from "Vegetables - 1980 Annual Summary Acreage, Yield, Production, and Value", issued June 5, 1981 by the Crop Reporting Board, Economics and Statistics Service, U.S. Department of Agriculture, Washington, D.C.

Note: These prices refer to that portion of the crop sold for fresh consumption. These averages are based on information supplied by growers, shippers, wholesale markets, auction markets and quotations from various Federal-State Market News Service reports. They represent sales for an entire month, f.o.b. shipping point. The U.S. monthly average prices were computed by weighing individual State average prices, by volume of sales during the month.
