P R E F A C E

Information summarized in this publication pertains essentially to the marketing of California's fresh market freestone peach crop for the 1979 season. Data includes shipments, unload distribution, shipping point prices, auction sales, wholesale market prices, acreage, production, crop value, and processing statistics. In addition, this report contains a brief summary of California's clingstone peach processing and production information. These basic statistical records reflect the supply and demand factors that affect the marketing of peaches. A brief summary of the Colorado peach crop is also included.

F.o.b. shipping point price coverage for the Central & Southern San Joaquin Valley was reported during May 16-October 3, 1979. Auction sales data shown in this report cover the markets of New York, Detroit, Philadelphia, and Pittsburgh. Terminal market prices are shown for Los Angeles, San Francisco, New York, and Chicago wholesale markets.

All prices shown in this summary, except auction sales, represent the first quoted price or first quoted price range as taken from the daily published market reports. Prices in the daily report shown as "few" and "occasional" were omitted from this summary, unless otherwise stated.

Preparation of this summary was by Wendell W. Stoker, local representative of the Federal-State Market News Service, Sacramento, California. Compilation and typing were performed by Isabel Fernandez and Paula Anchondo at Sacramento, California.

Data for this summary were compiled generally from various reports of the Federal-State Market News Service, California Crop and Livestock Reporting Service, the Cannery League of California, and the California Tree Fruit Agreement, all of Sacramento, Calif.; California Freestone Peach Association, Modesto, Calif.; California Canning Peach Association, Lafayette, Calif.; and the Crop Reporting Board (USDA), Washington, D.C. We wish to thank all those who have cooperated in making information available for this review.

PALLETIZATION & PRECOOLING CHARGES: During 1979, most buyers were charged by California packers-shippers 10 cents per lug (approx. 20-24 lbs.) for palletized shipments, including stacking and strapping of containers on pallet. For precooled shipments, most buyers usually were charged 40 cents per lug.

Additional copies of this summary are available upon request to:

MARKETING CALIFORNIA PEACHES

Summary of the 1979 Season

HIGHLIGHTS: California produced 234,000 tons of freestone peaches in 1979, 19% above 1978 and the same amount as in 1974 and 1977. Fresh markets took 59% of the total production while freezers took 18%, canners 16% and dry yards 7%. Bearing acreage was up slightly from 1978 but was below the past 5 year average. Yields were the highest of record. Fresh market prices were down slightly from the record high levels set in 1978. Dry-yard prices also were down compared with 1978. Canner and freezer prices were up. The total freestone crop value of over \$50 million was the highest of record. Freestone peaches ranked approximately 38th among the state's principal commodities. Recorded fresh market shipments were the equivalent of nearly 11.6 million lugs, the largest of record. Weather throughout the growing and harvesting period generally was about normal, with few unusual periods of hot or cold temperatures, or wind. Fruit marketed met U.S. No. 1 grade requirements. Over all quality was good.

1979 FACTS AT A GLANCE COMPARED WITH 1978 Freestone Peaches

Acreage - 21,080 bearing acres vs 20,490, up 3%.

Yield - 11.10 tons per acre vs 9.61, up 15.5%.

Production -

Fresh	- 137,000 tons vs 112,000, up 22%.
Canned	- 38,500 tons vs 32,500, up 18%.
Frozen	- 42,000 tons vs 35,000, up 20%.
Dried	- 16,500 tons vs 17,500, down 6%.
<u>Total</u>	<u>- 234,000 tons vs 197,000, up 19%.</u>

Price - at first delivery point -

Fresh	- \$263.00 per ton vs \$300.00, down 12%.
Canned	- 135.00 per ton vs 113.00, up 19%.
Frozen	- 145.00 per ton vs 91.00, up 59%.
Dried	- 136.00 per ton vs 185.00, down 26%.
<u>Average</u>	<u>- \$211.00 per ton vs \$222.00, down 5%.</u>

Value - Based on prices at first delivery point -
\$49,374,000 vs \$43,734,000, up 13%.

Utilization - Percent of total utilized production.

Fresh	- 59% vs 57%.
Processed	41% vs 43%.

Shipments - California origin -

11,581,800 lugs vs 9,853,600, up 18%.

Unloads - California origin at 41 U.S. & 5 Canadian
Cities - 6,786,600 lugs vs 5,719,400, up 19%.

FRESH SHIPMENTS: Recorded movement of California peaches to fresh market during 1979 totaled 11,581,800 lugs, 18% above 1978, and the largest of record. Truck shipments accounted for 98% of the total movement. The California Tree Fruit Agreement packout of peaches, with various containers converted to an equivalent 22 pound lug, totaled 11,999,112 lugs. This would indicate that 417,312 equivalent 22 pound lugs moved in mixed deciduous rail cars and other unrecorded ways. Total U.S. movement from all states was 30,657,000 equivalent 22 pound lugs, 17% above 1978. Shipments from the southern states totaled 12,570,900 lugs, 13% above 1978. South Carolina shipments were 16% above 1978 and accounted for 2/3 of the total from the southern states. Georgia shipments were 31% larger than a year ago, but comprised only 23% of the southern states' total. Movement from the eastern group of states reflected a 25% increase because of a larger New Jersey production despite a downturn from the Appalachian district. Midwestern states marketings totaled 646,900 lugs, a little above 1978.

UNLOAD DISTRIBUTION: Unloads of California peaches in 41 U.S. and 5 Canadian cities totaled 6,786,600 lugs, 19% above 1978. This was only slightly below the amount unloaded in 1977, which was record high. Distribution to the eastern group of markets was 285,500 lugs or 4% of the total; midwest 1,300,200 lugs or 19%; southern markets 1,046,000 lugs or 16%; western 3,669,100 lugs or 54%; and Canadian markets 485,800 lugs or 7% of the total. Unloads in midwestern and southern markets were slightly below 1978 levels while other area markets were above. Los Angeles continued to be the largest market for California peaches, with 2,005,400 lugs unloaded there in 1979. San Francisco-Oakland ranked second, with 930,500 lugs. Houston and Minneapolis-St. Paul were leading out-of-state markets. Toronto was the leading Canadian destination.

RAIL CAR LOADING DATA: Mechanically refrigerated cars again were estimated to average 2,200 lugs per car, while piggyback vans were loaded 1,600 lugs per carlot. Mechanically refrigerated cars took 85,400 lugs or 36% and piggyback vans took 150,500 lugs or 64% of the 1979 rail shipments.

F.O.B. SHIPPING POINT PRICES: Prices at shipping point generally were a little below those in 1978. Price quotations began May 16, one day later than in 1978. Prices were about steady the first several days of the season, then gradually eased downward through the first half of June. Prices then firmed about \$1.00 or so before beginning a decline in late June and reaching the lowest quotations on July 18. Prices generally were steady to firm the last half of the season.

EARLY SEASON PRICES: (May 16-June 15)
Shipping point prices during the first month of the season began at a higher level than in 1978 but following the Memorial Day holiday were at a lower level. Shipping point price reporting began May 16 at \$11.00 per 2-layer lug of 70-72s. The week of May 21-25 began at \$9.00-10.00 but closed the week at \$6.00 on this size. For the next 3 weeks, May 28-June 15, prices ranged \$5.00-6.00 on 70-72s. Springcrest was by far the major variety in this time period, followed by Merrill Gemfree and Royal May. The volume of Springcrest packed jumped 62% above 1978, to 1,450,000 packages, and was the largest of record. Shipments from California during April 22-June 16 totaled 2,721,000 lugs, 32% above the previous season. Shipments the week of May 27-June 2 totaled 846,400 lugs, the largest week in the early season period. Shipments from Georgia through June 16 totaled 1,273,200 lugs, up 34% from 1978, while shipments from South Carolina totaled 1,437,800 lugs, up 54%.

MID-SEASON PRICES: (June 16-July 27)
Shipping point prices in this time period through the end of June were approximately at the same level as the previous year, but following the Fourth of July holiday through the end of July, prices were lower. Record large volumes of peaches, plums and nectarines were packed in this time period. Additionally, a truckers' strike hampered nor-

mal marketing and movement of these stone fruits. Shipping point prices the week of June 18-22 ranged \$6.00-7.00 per lug of 70-72s. Prices declined the week of June 25-29 from \$7.00 to \$4.00-4.50. A further decline occurred around the Fourth of July holiday, with the price level at \$3.50-4.00 for 70-72s from July 5 through July 27.

Many varieties were harvested in this period, but large volume ones included Redtop 933,000 packages, June Lady 726,000, Suncrest 661,000, Fay Elberta 605,000 and Fayette 393,000 packages. For Redtop and June Lady these were record highs. Many of the Fay Elbertas were wrapped, and sold in peach boxes. California shipments for June 17-July 28 actually were 3% below the same period a year ago, and totaled 4,510,900 lugs. The largest week in this period was July 22-28 when 946,400 lugs were shipped. Georgia shipped 1,576,300 lugs in this period, and completed the season by the week ending August 4. South Carolina was in heavy volume and marketed 5,404,600 lugs in this six week period. New Jersey entered the picture the middle of July.

LATE SEASON PRICES: (July 28-Oct 3)
Shipping point prices in this period were about the same to lower than in 1978. Prices for 70-72s during the last nine weeks of the season were for the most part within a \$4.00-5.00 range. Prices for larger sizes ranged the same to \$.50-1.00 higher. Major varieties in this group included O'Henry 890,000 packages, Carnival 402,000, Fairtime 395,000, Parade 297,000, Summerset 176,000 and Autumn Gem 171,000 packages. California shipments July 29-Oct 13 totaled 4,349,900 lugs, a 37% increase over the same period in 1978. South Carolina dropped out of the picture by mid-September. New Jersey was a factor until the week ending September 22.

EASTERN AUCTION MARKETS: Sales of California peaches at eastern auctions in 1979 were primarily at New York, which received 90% of the auction volume total of 14,340 packages of all types. This auction volume amounted to less than 10 carlots. The season average auction price at New York for all varieties was \$6.23 per 2-layer lug or carton compared with \$9.05 a year earlier.

TERMINAL MARKET PRICES: Wholesale market prices at Los Angeles and San Francisco generally averaged a little below a year earlier. Wednesday prices for most yellow flesh varieties at Los Angeles during 1979 generally ranged from a low of \$3.00-4.00 per lug of 70-72s on July 25 to a high of \$11.00-13.00 per 2-layer lug of 70-72s on May 16. At San Francisco, prices for most yellow flesh peaches generally ranged from a low of \$3.00-4.00 per 2-layer lug of 70-72s on July 25 to a high of \$12.00-12.50 per lug on May 16.

PROCESSING UTILIZATION AND PRICES:

FREESTONE: Freezers took 42,000 tons of peaches in 1979, followed by canners with 38,500 tons and dry-yards 16,500 tons (fresh basis). Of the total crop, fresh markets took 58.5%, freezers 18.0%, canners 16.5%, and dry-yards 7.0%. During the previous season fresh markets took 56.8%, freezers 17.8%, canners 16.5%, and dry-yards 8.9%. The California Freestone Peach Association, and various processors in the state reached price agreement for the association members' tonnage as follows: Freezers for Fay Elbertas \$135.00 per ton, "early varieties" \$140.00 and "late varieties" \$147.50; canners for Fay Elbertas \$135.00 per ton; and dry-yards for various varieties \$117.00 per ton. State-wide season average prices as reported by the California Crop and Livestock Reporting Service by utilization include: Frozen \$145.00 per ton, canned \$135.00, and dried (fresh basis) \$136.00 per ton.

CLINGSTONE: Utilization of California's 1979 clingstone peach crop was placed at 655,000 tons, 18% above 1978. The 1974 and 1977 crops were larger. Excess cullage in 1979 was estimated at 45,000 tons, which coupled with the utilized production of 655,000 tons, gives a crop production estimate of 700,000 tons. Yields averaged 17.55 tons per acre, nearly 19% above 1978 and a record high. The growing season was almost ideal throughout 1979, and the high yields were welcomed by canners who generally were in an out-of-stock position on peaches and fruit cocktail. The clean, high quality fruit returned excellent case yields. Less than half the pack was put in the once favored 2½ can size, reflecting changing consumer preferences, and demand for 303 and No. 10 sizes. Canners

agreed to pay California Canning Peach Association grower-members a base price of \$150.00 per ton in 1979, \$15.00 above the previous season. Price agreement was reached with most processors by early April. The price established was based upon the No. 1 tonnage processed as related to a sliding scale of prices. Price differentials for the percentage of off-grade fruit in the delivery ranged from \$100.00-162.00 per ton, and compares with \$105.00-147.00 per ton the previous year. The average price compiled by the California Crop and Livestock Reporting Service at first delivery point was \$156.00 per ton, and delivered to the processor was \$178.00 per ton. Value of the cling crop at first delivery point was \$102,180,000, and on a delivered to processor basis was \$116,590,000.

PROCESSOR STOCKS AND MOVEMENT: The canned pack of California freestone peaches in 1979 was the equivalent of 1,493,000 cases (24 No. 2½ can basis), the largest since 1976. Movement of freestones during June 1-December 1, 1979, including carryover stocks from the previous season and 1979 pack, totaled 664,000 cases, the smallest of the four years records are available for this time period. Until 1978, stocks were tabulated as of January 1, but beginning in 1978 and for two prior years, data are as of December 1. The clingstone peach pack in 1979 was the equivalent of 24,554,000 cases (24-2½ basis), nearly 24% above 1978 but only slightly below the 1974-78 average of 24,980,000 cases. Movement of canned clings during June 1-December 1, 1979 totaled 13,428,000 cases (24-2½). This was 6% below the comparable period in 1978.

ACREAGE, PRODUCTION AND VALUE:

Freestones	
Acreage	-Bearing acreage in 1979 was 21,080 acres, 3% above 1978 but only slightly below the 1974-78 average.
Yield	-Yield was 11.10 tons per acre, 15.5% above 1978 and the highest of record.
Production	-Production totaled 234,000 tons, 19% above 1978 and the same as for 1974 and 1977.
Price	-The average price was \$217.00 per ton, 5% below the record reached in 1978, and the second highest of record.
Value	-The crop was valued at \$50,778,000, 12.6% above 1978, and the highest of record.

MARKETING COLORADO PEACHES

Summary of the 1979 Season

The estimated production, as reported by Statistical Reporting Service for Colorado peaches was 300,000 bushels for the 1979 crop. Due to adverse weather, about half of this estimate was shipped.

According to USDA Inspection Service, Mesa County shipped approximately 140,000 bushels. Delta County was sharply lower in peach shipments and accounts for less than 10% of the State's production.

F.o.b. prices were not reported in 1979 due to lack of shippers, sufficient volume and short season.

Quality was reported as excellent and demand for limited crop very good, with a sizable volume of fruit being sold at orchard and roadside markets.

Most of the commercial shipments were shipped this season in 3/4 bushel containers and bulk shipping began on July 30 with early varieties, and ended September 15. Peak shipments reported from August 21-30. The standard Elberta continues to be the predominate variety with volume of Redhaven, Blakes, Gleason and Hale also reported.

Compiled from reports of the Fruit & Vegetable Division, AMS, USDA, Washington, D.C. and records of the Federal-State Market News Service, Sacramento, California. Truck shipment data are collected at shipping point for those states showing shipments above except Arizona data represents interstate shipments. Truck data for all other states represents unloads in 41 U.S. cities.

a/ 1979 rail, air and truck data are preliminary.

b/ Air data represents unloads in 41 U.S. cities and the Hawaiian Islands except 1978 is shipments reported by airlines and 1979 is shipments collected at shipping point.

c/ 1975-78 data are from unloads in 41 U.S. cities, 1979 from shipments collected at shipping point.

d/ 1975-76 data are from 41 U.S. cities unloads and 1977-79 from shipments collected at shipping point.

e/ 1975-77 data are from 41 U.S. cities unloads and 1978-79 from shipments collected at shipping point.

f/ June-July are shipments from shipping point, April-May and Aug.-Sept. from unloads in 41 U.S. cities.

g/ Appalachian District includes Maryland, Pennsylvania, Virginia and West Virginia.

h/ Beginning in 1978 movement data shown under Appalachian District.

i/ 1975-78 data from unloads; 1979 from import records of the Department of Commerce, Bureau of the Census, Washington, D.C.

NOTE: 1975-77 data originally reported in cars and carlot equivalents, and converted to lugs using a factor of 1,500 lugs (33,000 pounds) per car except mechanical rail was estimated at 2,100 lugs in 1974, 1,850 lugs in 1975, 2,000 lugs in 1976, and 2,200 lugs in 1977; and piggyback vans were estimated at 1,500 lugs in 1974 and 1975, and 1,600 lugs thereafter. All 1978 and 1979 data were reported in weight and divided by 22 pounds to obtain lugs.

Compiled from daily prices reported by the Fresno Market News Service office and issued by the Sacramento office of the Federal-State Market News Service. Basis of shipping point prices: Daily prices represent the first quoted price or first quoted price range and include those prices defined as "some", but does not include prices and varieties quoted as "few" or "occasional", unless otherwise stated. Please refer to f.o.b. report in the daily "Deciduous Tree Fruit Report", Sacramento, California for more detailed information.

- a/ Wide range in prices.
- b/ Too few sales to quote.
- c/ Few.
- d/ Supply insufficient to quote.
