SHIPPING POINTS

STATISTICAL BULLETIN NO. 518
MAY 1973

UNITED STATES DEPARTMENT OF AGRICULTURE
Agricultural Marketing Service
Fruit and Vegetable Division
Washington, D. C.

P R E F A C E

Prices listed in this report represent sales in wholesale lots of certain fresh fruits and vegetables at New York City, Chicago and at important shipping points where market news field stations were located during 1972.

Wholesale prices for private sales at New York City and Chicago are simple averages of representative prices for each Tuesday. In arriving at the Tuesday prices, local market reporters consider estimated volume of sales at different price levels, quality, condition, and other factors. These wholesale prices in most cases represent private sales in less than carlot quantities. Generally they represent sales made by the first seller on the wholesale market. In a few instances, prices representing sales in carlots or sales at auction are reported, but these are indicated in the body of the report. Prices are for stock of generally good merchantable quality and condition, unless otherwise stated. Grades are shown where quoted by grade.

Prices reported for important shipping points or areas are simple averages of the mid-points of the daily range throughout the year as reported by local market news offices. They refer to sales in straight or mixed carloads or truckloads, unless otherwise noted. An average shipping point price for a month generally is shown only when there were quotations for six or more days during the month.

"Sales f.o.b.", are transactions in which the buyer assumes responsibility for the commodity at shipping point. "Delivered sales, shipping point basis", are transactions in which the seller assumes responsibility for delivery to the market. However, transportation and protective service charges are not included in prices shown.

The report includes a table of estimated value per carlot of fresh fruits and vegetables for 1971 and 1972 by months, at New York City and Chicago (Table 3). These estimates are intended to indicate a comparative trend rather than an absolute value per car. They do not include prices for produce sold in other sections of the country, nor do they include commodities sold on these markets which are not included in this price summary.

Factors used to convert truck, boat and air unloads to carlot equivalents were revised January 1, 1971, to reflect the trend toward heavier rail car loadings during recent years. These higher loading factors were used in computing the estimated value per carlot and are reflected in higher values per carlot.

Estimated value per carlot is computed by multiplying the monthly prices at New York City and Chicago for various commodities shown in this report by the number of packages per carlot for respective commodities. These computed carlot values are then weighted by the monthly unloads adjusted to carlot equivalents.

The Indices of wholesale value per carlot (Table 4) were computed from the wholesale value information described in the preceding paragraphs.

$\frac{1}{2}$ The monthly carlot values in this table were computed from representative average prices including both private sales and auction transactions, and average quantities per carload of each leading fruit and vegetable. For each commodity this average monthly carlot value was weighted by domestic carload, boat and available truck unloads in obtaining a monthly average carlot value for all commodities. Estimated values for the year were obtained by weighting the monthly figures shown in the table by the monthly unloads.

Fruits include: apples, blueberries, cantaloups, cherries, cranberries, grapefruit, grapes, honeydew melons, lemons, orange, peaches, pears, plums and fresh prunes, strawberries and watermelons.

Vegetables include: asparagus, beets, snap beans, broccoli, cabbage, carrots, cauliflower, celery, corn, cucumbers, eggplant, escarole, lettuce, mushrooms, onions, peas, peppers, potatoes, radishes, spinach, sweetpotatoes and tomatoes.

The ratio of the volume used each month to total domestic unloads varied generally from 85 to 95 percent. Some of the minor commodities were not used in the computations. Their inclusion would make little difference in the average value per car.

Table 4. --Index of wholesale value of fresh fruits and vegetables at New York City and Chicago, by months, 1953-1972 1/

Corresponding month 1967 = 100

1/ THE INDEX OF WHOLESALE VALUES presented in this table were computed from prices representing private and auction sales weighted according to the unloads of each fruit and vegetable for that month. Index numbers for the year were obtained by weighting the monthly data by the unloads for the respective months.

The following fruits and vegetables are included: apples, blueberries, cantaloups, cherries, cranberries, grapefruit, grapes, honeydew melons, lemons, oranges, peaches, pears, plums and prunes, strawberries, watermelons, asparagus, snap beans, beets, broccoli, cabbage, carrots, cauliflower, celery, yellow corn, cucumbers, eggplant, escarole, lettuce, mushrooms, onions, peas, peppers, potatoes, radishes, spinach, sweetpotatoes and tomatoes.
