# **FLORIDA SHIPMENTS FRESH FRUITS & VEGETABLES**

---

**SUMMARY  
1979-80  
Season**

**FLORIDA SHIPMENTS  
FRESH FRUITS AND VEGETABLES**

**SOURCE OF SHIPMENT DATA:** The U. S. D. A. Fruit and Vegetable Market News Branch in Washington tabulates the rail information from reports which were furnished by the various originating rail lines, and was the source of the rail data. Citrus truck shipments were from the certified records of the Florida Citrus Inspection Service. Vegetable and miscellaneous fruit truck shipments shown here were collected through the help of the Florida Road Guard Inspection Stations at check points strategically located along the St. Mary's River and Suwanee River. Exceptions to the latter collection were avocados and limes which were reported by the Avocado and Lime Administrative Committees; peaches and West Florida tomatoes were collected from shippers by the Thomasville, Georgia market news office; and West Florida watermelons were collected through large weight scales in the area. Citrus gift fruit movement came from the records of the Florida Department of Citrus.

Reported crop year in this publication extends from September 1 through August 31.

SUPPLY TABULATING PROCEDURE USED BY USDA - F&V MARKET NEWS BRANCH

The Fruit and Vegetable Market News Branch of USDA began using WEIGHT as the basis for all their supply records, shipments and unloads on January 1, 1978. All tabulations on movement from Florida and other states as well as for unloads is now reported in units of 10,000 pounds on a daily basis and 100,000 (1,000 CWT) pounds on an annual basis. On local reports an office does have the option of converting to the package of interest to the audience a particular report serves.

In the development of container weights the Washington office asks the various shipping point offices throughout the country to submit the typical net weight of packages used. This information was reviewed at the national level to reduce the number of package weights to one for the country when possible. If the reader believes his package or unit net weights are different than those being used he can adjust them by applying corrective factors. Historical conversion factors, loading before January 1, 1978, were adjusted based on the conversion factors in use at the time the data was reported.

The summary will be built into a ten year series again based on the USDA new reporting procedure. Another crop year's data will be added as each season progresses beginning with that for 1977-78.

FACTORS USED IN THE FLORIDA F&V SHIPMENT SUMMARY

As of January 1, 1978
