Weekly Carlot Arrivals & Prices to Jobbers of New York State Onions at Important Markets.....	8 - 9

MARKETING WESTERN AND CENTRAL NEW YORK

O N I O N S

BRIEF REVIEW OF 1941-42 SEASON

By

A. L. Thomas

Market reports on onions were issued from the Rochester office of the Federal-State Market News Service from September 2nd, 1941, thru April 18th, 1942. The information contained in this review consists principally of material obtained from the Rochester reports and departmental reports released from Washington, D. C. and Albany, N. Y.

The United States total production of Late commercial crop was estimated by the statistical division of the United States Department of Agriculture to be 11,143,000 (100-lb.) sacks compared with 12,285,000 sacks harvested from the 1940 crop, while the 10-year (1930-39) average for the country was 10,644,000 sacks of 100-lbs. each. This season's harvest was 9% less than harvested in 1940, but 4% above the 10-year average. There were 49,270 acres planted to the Late commercial crop in comparison with 55,090 acres in 1940, while the 10-year average was 53,790 acres. Yields this season were better than last season and the 10-year average. This season's yield was 226 (100-lb) sacks, while in 1940 it was 223, and the 10-year average was 198 sacks.

The movement by rail for the 1941 season through April 18th for U.S. was 25,791 cars as compared with 22,594 to the same time last season, while the total movement from the 1940 season was 23,098 cars.

New York State continues to rank first in the production of onions in the Late group of States and is followed by Colorado and Michigan. The acreage planted in New York State during 1941 was estimated to be 13,400 acres compared with 15,500 during 1940, and the 10-year (1930-39) average of 10,790 acres. Yields per acre were lighter this season than during 1940 and also less than the 10-year average. This season's yield was estimated to be 190 sacks of 100-lbs. each while in 1940 it was placed at 265 sacks, and the 10-year average was 237 sacks. Production for the State was considerably below that of 1940 and slightly lower than the 10-year average. This season's production was estimated to be 2,546,000 (100-lb.) sacks as compared with 4,108,000 sacks in 1940, while the 10-year average was 2,551,000 sacks.

Many of the onions for the 1941 crop had a difficult start at the beginning of the season. In some sections, those that were planted early were frozen. When replantings were made, some were blown out by severe winds, which also broke off many of the growing plants, leaving many fields, especially in Orange County, with a partial crop. Rains during early June improved the crop materially, but many of the fields of seed onions were from a few percent to as high as 60-70 percent bare of onions. The set onions suffered from the freezes but had largely outgrown this damage by mid-June.

Most of the set onions in the two important set onion sections, Madison and Orange counties, had been harvested by mid-August. Very few of the seed onions in the other sections of the State had been pulled by that time and were still standing in green condition and making good growth. There was some damage by thrips and sunscald and in a few instances by mildew. Growing conditions improved and there was a fairly good percentage of large size onions harvested. Weather conditions at harvest time were ideal in practically all sections, and the keeping quality of the onions was reported to be very good.

Prices at New York State shipping points were highest since the 1931-32 season. F.o.b. prices at western and central New York shipping points started in September at prices ranging mostly from \$1.00-1.18 for 50-lb. sacks of Yellow Globes, U.S.No.1, 60-80% 2 inches and larger, and continued to advance slightly each month thereafter, reaching the high of \$3.75-4.35 during the 3rd week of April. This was quite a contrast to the low prices of the 1940 crop when prices ranged from 55¢-82½¢ from the beginning of the season in September until late March when they reached \$1.15-1.75. Peak price for the 1940 crop was \$1.80 during the 3rd week of May. Prices paid the growers during the 1941-42 season started at \$1.50-1.90 and advanced consistently each month reaching \$3.25-4.00 per hundredweight during January and the top of \$7.00-8.00 during the 3rd week in April.

The rail shipments from New York State through April 18th were 4,537 cars as compared with 4,000 to the same time the previous season and a total movement for the 1940 crop of 4,552 cars. Due to the national emergency this season, the movement by truck was considerably lighter consequently increasing the rail movement.
