MARKETING WESTERN AND CENTRAL NEW YORK

O N I O N S

SUMMARY OF THE 1945-46 SEASON

Daily market reports on onions were issued from the Rochester office of the Federal-State Market News Service from August 28, 1945, through April 12, 1946. The information contained in this summary consists principally of information from these reports and from releases by the Crop Reporting Board, Bureau of Agricultural Economics, United States Department of Agriculture, and from the State Agricultural Statistician, Albany, N. Y.

UNITED STATES

The Late Commercial crop of onions in the United States was estimated by the Crop Reporting Board of the U. S. Department of Agriculture at 27,325,000 sacks of 50 lbs. each, 23 percent below the 1944 crop of 35,575,000 50-lb. sacks and 12 percent above average for the ten year (1934-43) average of 23,976,000 sacks. Of the six important late producing states, Colorado ranked first with a production of 5,670,000 sacks, New York second with 4,036,000 sacks, California third with 3,491,000 sacks, Michigan fourth with 3,040,000 sacks, Oregon fifth with 2,850,000 sacks, and Idaho sixth with 2,016,000 sacks. The outstanding change in the production in each of these six states over that of 1944 was in New York State where the production was approximately one half of that produced in 1944.

Shipments by rail from the late group of States through March 30 were 21,662 cars compared with 25,111 cars to the same date a year ago, and the final shipments for 1944 of 26,145 cars. Total shipments for the United States through March 30, 1946, were 31,786 cars as compared with 37,544 to the same date a year ago, and final movement for 1944 of 38,578 cars.

The acreage planted to onions in the late group of States during 1945 was estimated at 64,940 as compared with 76,890 acres in 1944, while the ten year (1934-43) average for this group was 56,920 acres. The yield per acre this season was estimated at 421 sacks of 50 lbs. each as compared with 463 sacks in 1944, while the ten year (1934-43) average for this group of States was 421 sacks.

NEW YORK STATE

For the second time in the past three years, New York State dropped to second place in the production of onions this season. This season's production was estimated at 4,036,000 sacks of 50 lbs. each as compared with 8,100,000 sacks in 1944, and with the ten year (1934-43) average of 6,128,000 sacks.

The 1945 acreage in New York State was estimated at 11,800 as compared with 15,000 in 1944 and with the ten year (1934-43) average of 13,080 acres. The yield per acre this season showed a decided drop over that of last season as well as that for the ten year average. Average yields this season was estimated at 342 sacks per acre while last season's yield was placed at 540 sacks per acre and the ten year average yield was estimated at 470 sacks per acre.

From the time the first onions were set and the first seed sown in the early spring, the weather was against this season's onion crop. The cool weather caused them to make a slow start and quite an acreage was blown out or badly damaged by heavy winds which necessitated considerable replanting. Later in the season the plantings were badly hit with sunscald and mildew. The flooding of some fields destroyed a considerable acreage and continued wet weather caused a heavy shrinkage at harvest time. The almost constant wet weather in early October caused a heavy rot shrinkage to some stock as the onions were not dry enough to place in storage. In some sections at harvest time the water was standing in the fields and advanced better than half way up the lower crate.

Shrinkage was heavy and many of the onions screened out as much as 50 percent in some sections. Sizes ran rather small for the most part, although a considerable portion of the crop ranged from 50-70% 2 inches & larger.

F.o.b. prices at western and central New York shipping points were decidedly different from the prices prevailing the previous season. This season all sales reported from harvest time until the season ended were at ceiling whereas during the previous season prices did not reach ceiling at any time. 50 lb. sacks of U.S. No. 1 stock 50-70% 2 inches & larger sold at ceiling as follows: September 1.89, October 1.89, November 2.14, December 2.14, January 2.29-2.31, February 2.44-2.46, March 2.59-2.61, and April 2.74-2.76. The few sales reported by growers to shippers were also at ceiling as follows: September 3.30-3.40 per cwt., October 3.30-3.40, November 3.80-3.90, December 3.80-3.90, January 4.00-4.10, February 4.40. No sales were confirmed after February. A considerable portion of this year's crop was purchased by truckers and terminal buyers direct from growers at undetermined prices. An estimated 150-200 cars moved to the Quartermaster Corps of the U.S. Army under priority order beginning January 2.

A report issued by the Department of Agricultural Economics, New York State College of Agriculture, showing the trend in acreage, yield and production of onions in New York and the United States from 1918 to 1945 states that in the United States the acreage of onions more than doubled from 1925 to 1936, then declined, but increased sharply in 1944, due to the temporary expansion in Texas and to an increase in Colorado. In New York State, the expansion in acreage did not start until 1935. From 1934 to 1940, the acreage increased 90 percent and has remained high except in 1943 and 1945 when plantings were restricted because of wet weather. The yield per acre averages higher in New York State than any of the other states in the eastern part of the United States. The New York yield per acre in 1945 was lower than in any year since 1928. The increase in onion production in the United States during the war has been at about the same rate as that prior to the war. New York grew 12 percent of the onions in the United States from 1937 to 1941.

The rail movement from New York State through April 6, 1946, amounted to 2,271 cars as compared with 3,607 to the same date the previous season and with the final movement for the 1944 crop of 3,984 cars.

1/ Includes onions used for processing (dehydration, etc.)

3/ Note that the total 10-year average figures ("group" and "all States") are the averages of the yearly totals, not the sum of the State or group averages.

4/ Yields per acre and price are for 50 lb. sacks.

5/ Includes some quantities not marketed and excluded in computing value: Texas, early spring-148,000 sacks in 1944 and 248,000 in 1945; California, early summer - 220,000 in 1944; Idaho - 660,000 in 1944 and Oregon - 126,000 in 1944.

6/ Short-time average.
