MARKETING WESTERN AND CENTRAL NEW YORK ONIONS 1956-57 SEASON

Daily Market Reports on onions were issued from the Rochester Office of the Federal-State Market News Service from September 24, 1956 through April 12, 1957. The information contained in this summary was obtained principally from these reports and from releases of the Crop Reporting Board, Agricultural Marketing Service, U.S.D.A. and from the office of the State Statistician, Albany, New York.

Units for vegetable estimates changed. In this annual summary as well as in all future releases, yield and production estimates for fresh market vegetables are on a weight basis.

UNITED STATES

The acreage, yield per acre and production of onions in the United States was considerably larger than during 1955 and the 6-year (1949-54) average. This season - 123,640 acres were planted as compared with 114,230 during 1955, while the 6-year average was 120,790 acres. Yields per acre this season were estimated at 200 cwt. in comparison with 187 cwt. during 1955 and 180 cwt. for the 6-year average. Production was estimated at 24,724,000 cwt. as compared with 21,412,000 cwt. in 1955 and the 6-year (1949-54) average of 21,680,000 cwt. The substantial increases over 1955 in New York, Michigan and California more than offset decreases in Idaho and Oregon.

NEW YORK STATE

The acreage planted to onions in New York State this season was the same as a year ago - 14,400, while the 6-year average was 14,570 acres. Yields were exceptionally high this season, averaging 345 cwt. as compared with 280 cwt. in 1955, while the 6-year average for the State was 274 cwt. With this higher yield, the total production this season was estimated at 4,968,000 cwt. as compared with 3,744,000 cwt. in 1955, while the 6-year (1949-54) average was 3,982,000 cwt.

1/ Acreage, yield and production for 1955 were reduced by the flood in August 1955. Estimated production pertains to "sound onions." Onions lost due to the flood are not included.

The weather during April and May was unfavorable in some sections, resulting in the crop being planted one to two weeks later than usual. There were some thin stands and considerable replanting was necessary. The weather was generally favorable during August and onions made good growth. Excessive rains in Steuben-Yates County section caused some thin stands and flooded areas resulting in lower yields than had been previously expected. Most growers in the principal onion sections used chemicals to keep the crop green and growing for a larger yield. Frequent rains during late August and early September delayed harvesting and drying in the fields to some extent, and most of the shippers started movement to market a little later than normal. Movement from the fields to common and cold storage was completed during the last week in October.

The seasonal f.o.b. price range on 50 lb. sacks of Yellows, US#1, 70-80% 2" and larger ranged from \$.75-1.95, slightly higher than during the past three seasons but far below the 1952-53 prices when the range was \$2.00-4.25. Prices paid growers bulk per cwt. on medium stock this season ranged from \$.90-3.60 as compared with \$.90-3.25 during the 1955-56 season. There was an exceptionally good movement for export this season to Canada, Germany, Holland and the West Indies. This export movement helped considerably in the movement of this year's large crop.

The movement by rail this season through March 30 was 607 cars as compared with a total of 1351 for the 1955-56 season. Movement by truck continues to increase, and it has been estimated by the trade that 80-90 percent of this year's crop moved in this manner.

1/ Mostly for fresh market but includes production used for processing and for dehydration.

2/ Includes some quantities not harvested and excluded in computing value: Early Spring, Texas 900,000 cwt. in 1956; Late Summer, Minnesota 90,000 cwt. in 1956.

ONION STOCKS REPORT - JANUARY 1, 1957

Stocks of onions held by growers and dealers in common and cold storage in New York State on January 1, 1957 are estimated at 1,455,000 cwt., 42 percent above last year's stocks but about 24 percent below the record stocks of January 1, 1954. Stocks on January 1, 1957 accounted for 29 percent of the 1956 crop while stocks a year ago amounted to 27 percent of the 1955 crop. Of the 1953 crop, 37 percent were still on hand January 1, 1954. The quantity of onions lost through grading, dumping, shrinkage, decay, and sprouting, from harvest to January 1 is excluded. No attempt is made to predict additional losses that will occur after January 1.

The location of estimated stocks in New York on January 1, 1956 and 1957 is shown by sections in the table below. The stocks in Orange County include some onions grown in other sections of the State.

1/ Cold storage holdings outside of New York City, as reported to the New York State Dept. of Agriculture and Markets.

2/ Cold storage holdings in all states, as reported to the Agricultural Marketing Service, United States Dept. of Agriculture.

ONION STOCKS IN STORAGE -- JANUARY 1, 1957

Stocks of onions in storage on January 1, 1957 were about 6 percent larger than those on hand a year earlier, the Crop Reporting Board has announced. Total common and cold storage holdings of 4,728,000 cwt. this year are about 6 percent below average, however. Common storage holdings are 4,388,000 cwt., up 12 percent from a year ago, while supplies in cold storage, at 340,000 cwt., are down 40 percent. The disappearance of late summer onions before January 1 established a new record high in 1956 and exceeded disappearance for the corresponding period in 1955 by 9 percent.

The supply of onions in the Eastern States on January 1 was about 42 percent larger than last year. In the Central States, about 5 percent more onions were on hand than a year ago. However, holdings in the Western States were down 16 percent. Onion losses have not been heavy this season except in certain localities; notably Idaho, eastern Oregon, and parts of Colorado, Iowa and New York.

The stocks estimates in these reports relate to quantities of sound onions held by growers and dealers. In estimating stocks the quantities of onions lost before January 1 through grading, dumping, shrinkage, decay, and sprouting is excluded. No attempt is made to predict additional losses that will occur after January 1.

ONIONS January 1 stocks held in common storage by growers and dealers in Late Summer States, and January 1 stocks in cold storage in all States, by regions, average 1950-55, annual 1956 and 1957
