## MARKETING WESTERN AND CENTRAL NEW YORK ONIONS 1962-63 SEASON

Daily Market Reports on onions were issued from the Rochester office of the Federal-State Market News Service from September 5, 1962 through April 26, 1963. Information contained in this Summary was obtained from these reports and other releases by the Crop Reporting Board of the U.S. Department of Agriculture, and from the office of the State Statistician in Albany.

### UNITED STATES

The harvested acreage of onions in the United States this season was estimated at 96,230 acres, considerably higher than last year 90,900 acres, but considerably lower than the 10 year (1951-60) average of 113,740 acres. With an increase in acreage and yields slightly higher than last year, production was higher. Yield per acre this season for the country was estimated at 270 cwt. as compared with 260 cwt. in 1961, while the ten year average was 206 cwt. Production for fresh market and processing this season was estimated at 25,992 thousand cwt. as compared with 23,615 thousand cwt. while the ten year average for the country was 23,363 thousand cwt. Stocks of sound onions in storage (common and cold) on January 1, 1963 were 18 percent more than a year ago and 8 percent above the five year average, (1957-61). Supplies in common storage 4,999,000 cwt. was 17 percent larger than last year, and cold storage stocks of 356,000 cwt. were 36 percent more than a year ago.

### NEW YORK STATE

Increase in acreage, larger yield this season combined to produce a crop in the State greater than last season or the ten year average. The harvested acreage in New York State this season, was estimated at 14,600 acres as compared with 14,100 acres during 1961, and the ten year (1951-60) average of 14,530 acres. Yields during 1962 averaged 340 cwt. as compared with 310 cwt. during 1961 and the ten year average of 305 cwt. Production this year, in New York State, was estimated at 4,964 thousand cwt. as compared with 4,371 thousand cwt. last season and the ten year average of 4,419 thousand cwt.

Dry conditions prevailed over most sections of the State in early Spring. The crop was generally up to normal development and about a week ahead of last year. In Western and Central New York muck land areas, wind damage and some "burning off", thinned onions considerably in many fields. Set onions were damaged by dry conditions and sized poorly. Frequent rains at harvest time caused some delay in getting the crop to storage. Many fields were damaged in the Elba and some other sections by wind during May, but most were replanted. Each season more and more growers are using sprout inhibitor and it is proving very satisfactory and prolongs the movement of good stock to markets.

F.o.b. prices at shipping point this season on 50 lb. sacks of Yellows U.S.#1, 70-80 percent 2<sup>h</sup> and larger ranged from .90 to \$1.95 as compared with \$1.15 to \$4.40 last season. Prices paid growers, bulk per cwt. for U.S.#1 stock ranged from \$1.25 to \$3.25 from the beginning of the season through April when reports were discontinued. Last season, prices ranged from \$1.75 to \$8.00. Weekly price ranges will be found on another page in this Summary.

The export of onions to West Germany, Sweden, Ireland, Holland, Denmark, Norway, Finland, United Kingdom, and Canada was the heaviest on record, and this factor helped considerably in maintaining prices this season.

ONION STOCKS IN STORAGE -- JANUARY 1, 1963

Stocks of sound onions in storage (common and cold storage) on January 1, 1963 were 18 percent more than a year ago and 8 percent above the 5-year, 1957-61, average. Supplies in common storage, at 4,999,000 hundredweight, were 17 percent larger than last year and cold storage stocks, at 356 hundredweight, were 36 percent more than a year ago.

Total onions on hand in the Eastern States on January 1 were 31 percent more than last year and supplies in the Western States were 47 percent larger than a year ago. In the Central States, 18 percent less onions were on hand January 1 than a year earlier. Stocks in common storage on this January 1 were larger than a year ago in the important States or areas of New York, Idaho and Eastern Oregon, Colorado, Washington, Western Oregon and California, but smaller in Michigan, Wisconsin, and Minnesota. Shipments to January 1 were heavier than for the same period a year ago in New York, Michigan, Colorado, and California, but smaller in Wisconsin, Minnesota, Idaho and Eastern Oregon. Percentage of production lost to January 1 was lower than last year in New York, Michigan, Wisconsin, Colorado, and Washington while Minnesota, Idaho and Eastern Oregon and Western Oregon had heavier losses.

The stocks estimated in this report relate to quantities of sound onions held by growers and dealers. In estimating stocks, the quantity of onions lost before January 1 through grading, dumping, decay and sprouting is excluded. No attempt is made to predict additional losses that will occur after January 1.

ONIONS: January 1 stocks held in common storage by growers and dealers in Late Summer States, and January 1 stocks in cold storage in all States, by regions, average 1957-61, annual 1962 and 1963

1961	17,320	10,967	1,829	4,284	262	4,546	4,116	408
1962	19,354	11,883	2,132	4,999	356	5,355		

\*Utilization does not balance with late summer production or stocks because  
 (1) cold storage holdings include all onions regardless of the seasonal group,  
 (2) cold storage onions stored outside of late summer producing areas, and  
 (3) cross State movement of onions in some years.

ONION STOCKS REPORT - JANUARY 1, 1963

New York Onion Stocks: Total onions on hand in New York State on January 1, 1963 were 31 percent more than last year, according to the New York Crop Reporting Service. Estimated stocks of 1,740,000 cwt. held in common and cold storage accounted for 35 percent of the 1962 production. On January 1 last year 30 percent of the 1961 production was in grower and dealer storages. The stocks estimates in this report relate to quantities of sound onions held by growers and dealers. In estimating stocks, the quantity of onions lost before January 1 through grading, dumping, shrinkage, decay and sprouting is excluded. No attempt is made to predict additional losses that will occur after January 1.

The following table shows the location of onions in storage in New York. In some cases storages contain small quantities of onions that were grown in other parts of the State. These stocks also include onions contracted for future delivery, such as for the export trade.
