

Peanut Marketing Summary 1979-1980 Crop

For the States of:

Southeast:

Alabama

Florida

Georgia

South Carolina

Southwest:

New Mexico

Oklahoma

Texas

Mid-Atlantic:

North Carolina

Virginia

Federal-State Market News

United States Department of Agriculture

This is a summary of the 1979-80 peanut marketing season and is released by the Federal-State Market News Service at Thomasville, Georgia.

Shipping point price information was summarized from weekly Peanut Market News reports. Other information was obtained from the Crop Reporting Board, the Federal-State Inspection Service, the Agricultural Stabilization and Conservation Service and the Foreign Agricultural Service.

We express our sincere appreciation to the government agencies mentioned above and also to the members of the industry for their cooperation and time, which made this report possible.

Additional copies of the report may be obtained from:

THE 1979-80 PEANUT CROP IN REVIEW

GROWING CONDITIONS: The overall conditions for the 1979-80 crop were generally favorable. Growers began planting early peanuts in South Texas around mid March. Rain interrupted planting activities at the end of the month. Growers in the Southeast were active during March with field preparations as weather conditions were favorable. Planting began in the Southeast by the first week of April and was mostly complete by mid May. Very light planting began in North Carolina by the last week of April. Widespread planting was underway by the second week of May. Planting in Central Texas and in Oklahoma was active by about the same time. Rains in all areas delayed planting in the early weeks of May. Continued rains were quite beneficial for the Southeast but wet fields delayed planting progress in the Virginia-North Carolina section. In the Southwest, progress was near normal although there were some rains which delayed activities.

Conditions were varied in the different sections throughout the growing season. Leaching of nutrients was a problem in Virginia-North Carolina due to heavy rains in late June. Cool nights at the same time were also a problem as they tended to slow growth. There were timely rains in the Southeast and the Southwest during the season providing good growing conditions. Adequate rains continued through July and into August in all three areas.

Light harvesting on the early crop in South Texas began by the third week of July. Harvest in Georgia and Florida was underway by the last of August. Hurricane David came through in early September dumping 4 to 8 inches of rain in the Virginia-North Carolina area but causing only minimal damage. The hurricane delayed harvest only in Southeastern Georgia for the Southeast section. The rest of the peanut belt was mostly unaffected. Hurricane Frederic had an affect in the second week of September in Western Alabama. It delayed harvest in that area. Harvest was actively underway in Texas and was beginning in Oklahoma by this time. Wet weather in late September delayed harvest in the Southeast and prevented growers from getting started in the Virginia-North Carolina section. Harvest was near complete in the Southeast by mid October and was well along in the Southwest and the Virginia-North Carolina section. By the end of the first week of November, practically all peanuts were harvested.

ACREAGE, YIELD AND PRODUCTION-1/: Total peanut acreage harvested for the 1979-80 crop was 1,519,700 acres. This compares to the 1,509,100 in 1978 and 1,516,400 in 1977. The acreage allotment for the 1979 crop was set at 1,614,000 acres. Average yield per harvested acre was put at 2,611 pounds, down only slightly from the record yield of 2,619 in 1978. Yield per acre in 1977 was put at 2,457 pounds.

Production for the 1979-80 crop was estimated at a record level of 3,968,485,000 or 3.97 billion pounds. This was only 0.4% larger than the previous record size crop of 3.95 billion pounds in 1978. The 1977 and 1976 peanut production was put at 3.73 and 3.75 billion pounds respectively.

MARKETING - 2/: The 1979-80 crop average support price to growers was set at \$420 for quota and \$300 for additional peanuts. F.O.B. shipping point sales from shellers were first reported in late winter and early spring of 1979. They continued on until the first of September when the harvest of new crop (1980-81) peanuts was underway. Prices firmed up towards the end of the marketing season as new crop prospects were continuing to deteriorate.

SOUTHEAST AREA: Preharvest contracts started in March 1979 with a price for shelled Jumbo Runners at 37 1/2 cents for fall delivery. The average monthly price declined steadily to a low of 35 3/8 cents for December. The price proceeded to increase to a level of 41 cents by August 1980 reflecting storage, interest costs, improved demand, and apprehension over new crop prospects. Medium Runners started at 34 1/2 cents, fluctuated somewhat, and closed at 38 1/8 cents. Sales of U.S. No. 1 Runners were first reported in May 1979 at 31 5/8 cents and moved mostly higher to close at 37 cents in August 1980.

VIRGINIA-NORTH CAROLINA AREA: The inshell Virginia Fancys sold first in August of 1979 at 35 cents. Prices declined through the harvest months to a low of 34 1/2 cents in October but then moved steadily higher to close at 37 5/8 cents in August 1980. Shelled Virginia Extra Large sold in August at 42 3/4 cents and moved mostly higher to finish out the marketing season in August 1980 at 46 1/2 cents. Shelled Virginia Mediums averaged 37 1/8 cents in May 1979 and 41 5/8 cents by August 1980.

SOUTHWESTERN AREA: Shelled Jumbo Spanish first traded in June 1979 at 39 1/2 cents and were mostly steady through March 1980. Prices then strengthened to close at 41 5/8 cents in August. U.S. No. 1 Spanish sold in May 1979 at 38 5/8 cents. They fluctuated slightly up and down until March 1980 when the price went higher to close at 41 1/2 cents. Shelled Jumbo Runners started out in July at 37 cents but declined to a low of 35 3/8 cents by December. The price increased from January on to close at 34 cents by August 1980. Medium Runners initially sold at 35 cents in July 1979 and closed in August 1980 at 39 1/4 cents. New Mexico Valencias traded at 36 cents at harvest time in October 1979. The price of the Valencias increased through the marketing season to finish up averaging 37 5/8 cents for August 1980.

WORLD PRODUCTION: 3/ The United States was the third largest producer of peanuts in 1979-80 with a total production of 1.8 million metric tons.^{4/} Total world production was estimated at 17.7 million metric tons. This compares with 18.1 in 1978 and 17.1 in 1977. The two largest producers, India and China (PRC), produced 5.8 and 2.8 million metric tons respectively.

1/ Source: Crop Reporting Board, ESS, USDA

2/ Prices quoted prior to harvest on sales were mostly for fall delivery. After harvest, prices quoted on sales were mostly for prompt delivery.

3/ Source: Foreign Agriculture Circular, Oilseeds and Products, FAS, USDA

4/ A metric ton equals 2204.6 pounds

FOOTNOTESPEANUTS - AVERAGE QUALITY FACTORS 1969-1980 CROPS

- 1/ Quality factors for 1969-77 derived from sample data; factors for years 1978 and 1980 derived from total of all certificates received and tabulated. Since 1960 this data has been prepared and summarized by the Kansas City Data Systems Field Office from inspections reported by the Federal-State Inspection Service. Foreign material, moisture, and loose shelled kernels are expressed as percentages of the gross weight of the peanuts. Sound mature kernels, sound splits, other kernels and damaged kernels are expressed as percentages of the total weight excluding foreign material, excess moisture and loose shelled kernels.
 - 2/ The mechanical sheller was used for the first time in 1961 in grading farmers stock peanuts. Sound split kernels were tabulated for the first time in 1961.
- * Averages are not rounded to balance.
