WESTERN CITRUS SUMMARY

1983--1984 SEASON

Foreword

Market reports on citrus fruits were issued twice weekly from the Los Angeles office of the Federal--State Market News Service during the 1983-84 season. This summary was derived from these reports and from reports released by the U. S. Department of Agriculture, Washington, D.C.; the California Crop and Livestock Reporting Service, Sacramento, California; the Orange and Lemon Administratives Committees, Los Angeles, California; and the Grapefruit Administrative Committee, Indio, California.

F.o.b. prices shown in this summary are weekly price ranges.

Shipments, unloads and other similar data for the 1983-1984 season are considered final and represent the citrus crop season from the first of November 1983 to the end of October 1984 except lemons which are from the first of August 1983 to the end of July 1984.

**U.S. ORANGE PRODUCTION
1983-84 CROP**

Total utilized orange production in the U.S for the 1983-84 crop was estimated by the Crop Reporting Board, SRS, at 169.31 million field boxes*. This was a decline of 25 percent from the 1982-83 crop of 225.18 million field boxes. Valencias comprised 63.36 million boxes or 37 percent of the 1983-84 orange crop. Navels ** were put at 105.9 million boxes or 63 percent of production. Orange production was down in all producing states. The reductions in Texas and Florida were primarily due to the December, 1983, freeze.

All California oranges represented nearly 29 percent of the total U. S. production of oranges. Navels in California were estimated as 31 percent of the U.S. navels** and California valencias were 24 percent of the total valencia production. The production of all California oranges was estimated at 48.3 million boxes for 1983-84. This was a sharp reduction of almost 37 percent from the record 1982-83 crop of 76.1 million boxes. Total orange production in Arizona was put at 1.8 million boxes compared with 3.8 million in 1982-83.

**CALIFORNIA/ARIZONA
NAVELS**

The 1983-84 navel orange crop in California was estimated at 33.3 million field boxes by the Crop Reporting Board, SRS. This was a 17 percent decline from the 1982-83 navel crop of 40.2 million field boxes. Arizona navel orange production for 1983-84 was .55 million boxes, down 48 percent from the 1.05 million boxes of 1982-83. The 1981-82 navel crop was put at 26.5 million and .9 million boxes for California and Arizona respectively.

The bearing acreage of navels in California was estimated at 109,496, a slight increase over the 108,942 acres of 1982-83. The acreage of navels in Arizona was put at 5,110 for 1982-83. The acreage for 1981-82 was 107,793 in California and 5,570 in Arizona. Yield per acre for navels in California for the 1983-84 crop was put at 304 field boxes. This compared with a yield of 373 for 1982-83 and 246 boxes for the 1981-82 crop.

Weather conditions in California and Arizona were generally favorable during the 1983-84 growing season. Rainfall was average or above through much of December. After that period, weather was dry with unseasonably warm weather. These conditions tended to accelerate fruit growth and crop maturity. There was a hard freeze in both Florida and Texas in the last week of December, 1983. Both states were hard hit with the Texas orange crop for fresh market reduced to almost nothing. The Crop Reporting Board reduced its estimate of the Florida orange crop as of January 1, 1984 to 129 million field boxes from its December 1, 1983 estimate of 168 million.

Harvesting of the California navel orange crop got underway in the Central District in late October. The South District began harvesting a few navels by the first of December. The size of the early navels peaked on 72s and 88s in the Central and in the South District. As the season progressed, the peak sizes of navels tended more towards larger sizes in the Central District. By mid February, peak sizes were 56s and 72s. The South District navels during this period were heavy to 72-113s. For the season, shipments out of the Central District were mostly 72s with 56s and 88s close behind. The South District shipments consisted more of smaller sizes. The peak size there was 113s with 88s and 138s only slightly behind. Harvesting and shipments of navel oranges from all Districts was completed by the end of May 1984.

(Continued)

CALIFORNIA/ARIZONA NAVEL ORANGES continued

The first f.o.b. shipping point report on navels of the 1983-84 season was issued on November 10, 1983. On the first report, shippers first grade 56s were \$8.50, 88s were \$7.50-8.50 and 113s at \$7.00-8.00. This compared with the intial report of early November, 1982 when 56s were \$18.00, 88s were \$17.00 and 113s were \$15.00. South District navels were quoted for the first time on December 19, 1983. The 56s were \$7.00-7.50, 88s and 113s were \$7.50-8.00. On the same date, Central District 56s were \$5.25-5.75, 88s and 113s were \$7.00-7.50. Prices declined to seasonal lows in late February through the second week of March. During this period, Central District 56s were \$5.00-5.75, 88s were \$6.00-6.50 and 113s were \$6.50-7.00. South District 56s were \$5.75-6.50, 88s were \$6.50-7.00 and 113s were \$7.00-7.25. The market improved slightly through the balance of March and April. The last report of the season on South District navels was issued April 19 when 56s were \$6.75-7.50, 88s and 113s were \$8.50-9.00. Prices continued to improve for Central District navels through April and finished strongly with the last report issued on May 21. The 56s were \$8.00-8.25, 88s and 113s were \$10.00-10.25.

**CALIFORNIA/ARIZONA
VALENCIAS**

The 1983-84 California valencia orange crop was estimated at 15 million field boxes by the Crop Reporting Board, SRS. This was a sharp reduction of 58 percent from the 1982-83 valencia crop of 35.9. The 1983-84 crop was more similar to the 1981-82 production of 15.4 million boxes. The valencia orange crop for Arizona was estimated at 1.8 million boxes compared to 3.8 million boxes for 1982-83 and 2.15 million in 1981-82.

The bearing acreage of valencias in California was estimated at 67,994 acres for 1983-84. This was a slight increase over the 67,766 acres of 1982-83. Acreage in Arizona in 1982-83 was 7,530. The 1981-82 estimates were 71,914 acres for California and 7,950 acres for Arizona. Yield per acre for California was put at 221 field boxes. This was sharply below the 1982-83 crop yield of 487 boxes but slightly above the 214 boxes for the 1981-82 crop.

Weather conditions for late 1983 and 1984 were dominated by above normal temperatures and below normal rainfall. There was only limited rain-fall after the first of 1984. Harvesting of valencias got underway in Arizona in mid to late January. This was also a period of extremely high winds especially in the South District. There was some scarring and a minor amount of fruit loss as a result. The harvesting of Coachella Valley valencias started around the first of February. Harvesting of valencias in the South District got underway by March with the Central District starting harvest by the end of April. Harvesting gained momentum through April and into May as domestic and export demand improved. Quality was mostly good. The navel harvest declined sharply by mid May. The temperatures continued to run above normal with very limited rainfall in May and June. The Arizona valencia crop harvest was estimated as 75 percent complete as of May 1, 1984. As of June 1, the California valencias were 32 percent complete. There were reports of fruit drop in late June and early July due to the continuing hot, dry weather. Harvesting slowed during this period primarily as a result of reduced demand because of competition from summer fruit. The weather pattern continued to be mostly hot and dry through July, August and September. The quality of some valencias deteriorated by late August as a result of the weather. Harvest in the Central District was mostly complete by the end of October. Light harvesting continued in the South District through October and into early November.

(Continued)

CALIFORNIA/ARIZONA VALENCIA ORANGES continued

The first f.o.b. shipping point report on valencias for the 1983-84 season was issued on March 30, 1984. The South District shippers first grade 56s were \$5.75-6.00, 88s were \$10.00-10.50 and 113s were \$8.75-9.00. This compared with the 1982-83 season's first report where 56s were \$9.25-9.50 88s were \$9.25-9.50 and 113s were \$7.25-7.50. These early valencias peaked on mostly 113s and 138s. Valencias from Arizona-Desert Valley (Coachella) were peaking on 88s and 113s at the same time. The prices for valencias improved from the early reports. By the end of May, South District 56s were \$10.00-11.00, 88s were \$13.50-14.00 and 113s were \$13.00-13.50. Central District 56s were \$10.50-11.00, 88s and 113s were \$13.00-13.50. The market for valencias strengthened through the balance of the deal to close out at the seasonal high. The last report on Central District valencias was issued on October 15 when 56s were \$15.00-15.50, 88s were \$15.50-16.00 and 113s were \$14.00-14.50. The last f.o.b. of the 1983-84 season was issued on South District valencias on November 5. The 56s were \$15.50-16.00, 88s were \$16.00-16.50 and 113s were \$14.50-15.50.

U.S. GRAPEFRUIT PRODUCTION 1983-84 CROP

The utilized grapefruit production in the U.S. for 1983-84 was estimated at 53.44 million field boxes* by the Crop Reporting Board, SRS. This was 12 percent below the 1982-83 crop of 60.6 million boxes. The reduction was due primarily to the freeze-reduced crop in Texas. The 1983 crop in Texas was a drastic 71 percent less than the 1982-83 crop due to the December 1983 freeze.

CALIFORNIA/ARIZONA GRAPEFRUIT

California grapefruit production from all areas was estimated at 7.24 million boxes. This was only slightly below the 1982-83 crop of 7.3 million boxes. Arizona production was estimated at 2.1 million boxes compared with 2.7 million boxes in 1982-83. The 1981-82 grapefruit production was 6.0 and 2.4 million boxes for California and Arizona respectively.

The bearing acreage of grapefruit for the 1983-84 crop in California was put at 21,892. This was comprised of 10,299 acres of Desert grapefruit (primarily Coachella Valley) with the balance in other areas. The acreage in California for 1982-83 was 21,314 and 21,995 in 1981-82. Arizona acreage for 1982-83 was estimated at 6,800 and for 1981-82 at 8,160 acres. Yield per acre in California was put at 324 boxes for the Desert and 336 boxes for others areas. The 1982-83 yields were 421 for the Desert and 276 for other areas.

The first f.o.b. report of the season on California grapefruit was issued on Thursday, November 3, 1983. California grapefruit is shipped year round. Therefore, the season is established as November 1 through October 30. The first report had red 27s and 32s at \$7.50-8.00 and 40s at \$4.50-5.50. White 27s and 32s were \$7.00-7.50 and 40s were \$4.50-5.00. This compared with the opening f.o.b. price of the previous season of \$4.00-4.50 on red 27s \$4.75-5.00 on 32-36s and \$4.50-5.00 on 40s. White prices were nearly identical to those of the red grapefruit. The 1983-84 crop prices declined through November and most of December to reach lows on red 27s and 32-36s at \$4.50-5.50 with 40s at \$4.00-5.00. White 27s and 32-36s were \$4.50-5.50, 40s were \$4.50-5.00. The market began to improve shortly thereafter and remained fairly stable through June. Red prices fell sharply to seasonal lows in July. White
(Continued)

CALIFORNIA/ARIZONA GRAPEFRUIT continued

supplies were insufficient to quote during July. Red 27s, 32-36s and 40s were \$4.50-5.00. Prices improved steadily through August, September and October to close out the 1983-84 season fairly strongly. Red 27s were \$7.00-7.50, 32-36s were \$6.50-7.00 and 40s were \$6.50-6.75. White 27s were \$7.50-8.00, 32-36s were \$6.75-8.00 and 40s were \$6.75-7.75.

**CALIFORNIA/ARIZONA
LEMONS
1983-84 CROP**

Production of lemons in California was estimated by the Crop Reporting Board, SRS, at 17.25 million field boxes for 1983-84. This was a 15 percent decline from the 20.3 million boxes in 1982-83. Arizona lemon production was put at 4.0 million compared to 5.05 million boxes in 1982-83. The 1981-82 crop was 18.5 million boxes for California and 6.3 million for Arizona.

The yield per acre for the 1983-84 crop in California was 335 boxes compared with the 400 boxes estimated for 1982-83 and 341 boxes in 1981-82. Yield per acre in Arizona was estimated at 260 boxes for 1982-83 and 292 boxes in 1981-82. Bearing acreage of lemons for California was put at 51,443. This was compared to the 49,728 acres in 1982-83 and 54,242 in 1981-82.

The crop year for lemons is established as extending from August 1 through July 31, as lemons in California and Arizona are harvested year round. The smaller crop of 1983-84 allowed for significantly less fruit to go to processing. Processing accounted for only 46 percent of the crop compared with 54 in 1982-83 and 57 percent in 1981-82 for California and Arizona combined. Export demand was improved over the previous season. Exports comprised some 22 percent of the utilized production compared with 18 percent in 1982-83 and 15 percent for 1981-1982. The largest export customers for U. S. lemons were Canada, Hong Kong, and Japan.

Harvesting of the 1983-84 crop lemons, as of August 1, 1983 was limited mostly to the South District (District 2). There were light shipments of Central District (District 1) lemons but the harvest there was winding down quickly. The peak sizes of lemons in August were heavy to the larger sizes. The percentages of 140s, 115s, and 95s and larger were very similar. Harvesting got underway in a light manner in the California Desert-Arizona District (District 3) by the end of August. In September, shipments declined from the South District as they increased from the Desert. This trend continued through October. Shipments were at a seasonal low in the South District during November through mid December. Conversely, the California Desert-Arizona District shipments were at their peak during this period. Harvesting and shipments of South District lemons, as well as the Central District, increased sharply from January through March and April. The peak sizes had declined to where the 140s and 165s were the most common. The Central District shipments begin to decline by May while the South District peaked in May and held at only slightly lower levels through June and July. Size for the season's shipments seemed to peak on 140s.

The f.o.b. shipping point reports of the first week of the 1983-84 season showed 95-115s at \$11.75-15.50, 140s and 165 at \$16.75-17.00, and 200s at \$14.25-14.50. This was compared to the opening of 1982-83 when 140s were \$16.00-16.50, 165s and 200s were \$17.50-18.00. The price on larger sizes, 95-115s, improved sharply. By the second week of September, they were \$20.00-21.00. The 140s and 165s had changed only
(Continued)

CALIFORNIA/ARIZONA LEMONS continued

slightly; but, 200s had declined to \$8.50-9.00. Prices began to decline on all sizes of lemons by the first of October. By the end of November, 95-115s were \$12.50-17.00, 140s were \$8.50-9.00, 165s were \$6.50-7.00 and 200s were \$5.50-6.50. In December, the market on 140s and larger declined sharply while 165s and smaller improved slightly. The 115s and larger reached the seasonal low by the first of February. The 95-115s were \$7.50-10.00, the 140s were \$7.50-8.50, 165s were \$7.25-7.75 and 200s \$7.50-8.00. The lemon f.o.b. prices tended to fluctuate for the balance of the season but with an overall upward trend. The season closed on a strong note with 95-115s at \$18.00-19.00, 140s and 165s at \$16.50-17.00 and 200s at \$14.50-15.00.

| Florida 4/ | 3,800 | 3,600 | 3,700 | 171 | 162 | 167 |

1/ The crop year begins with the bloom of the first year shown and ends with year harvest is completed.

2/ Net lbs per box: Oranges: California and Arizona 90; Texas 85; Grapefruit: California Desert and Arizona 64; California other 67; Florida 85, Texas 80; Lemons: 76; Tangelos and Temples 90; Tangerines: California and Arizona 75, Florida 95.

3/ Navel and Miscellaneous varieties in California and Arizona. Early and Midseason varieties in Florida and Texas, including small quantities of Tangerines in Texas.

4/ Estimates for current year carried forward from earlier forecast.

5/ The first forecast for California grapefruit "other areas" will be as of April 1.

6/ Due to the severe freeze of December 1983 the 1984-85 Texas citrus crops are very limited and forecasts will not be issued this season unless sufficient commercial supplies become available.
