SHOES

CONSUMER TIPS > >

CARE OF SHOES

1. Never put wet shoes near radiator or stove to dry. Always allow wet leather to dry slowly.
2. Polish helps to preserve leather - keep shoes shined.
3. Have soles, & especially heels, repaired before they are too far gone - worn heels twist shoes out of shape.
4. Perspiration is hard on shoes - if possible, have two pairs of everyday shoes and wear alternately.
5. Wear shoes to fit purpose intended, if possible. For example, don't wear high-heeled, thin-soled shoes for long shopping trips or hikes. (over)

REMOVING GREASE STAINS

1. Grease stains should be removed as quickly as possible.
2. Cover stain with thick coat of rubber cement.
3. When almost dry, peel off coating.
4. Repeat a couple of times if necessary.
5. Prepared rubber cements are satisfactory if they are thick, dry very fast, and contain nothing but rubber and a pure solvent.
6. Gasoline and other grease solvents are usually not satisfactory for removing grease from shoes.
