Division of Markets

FOREWARD

The Federal-State Market News Office at Benton Harbor, Michigan issued daily reports on Michigan Onions. These reports covered the F.O.B. prices for the late summer and fall Onion crop. This service was made possible by the U.S. Department of Agriculture, Agricultural Marketing Service, Fruit and Vegetable Division, Market News Branch and the Michigan Department of Agriculture, Marketing Division.

The information contained in this summary was obtained from the daily reports issued at Benton Harbor. Other sources of information: The Michigan Crop Reporting Service, The Statistical Reporting Service, U.S.D.A., Washington, D.C., and Market News Transportation Reports Section.

We wish to express our sincere appreciation to all segments of the industry for their cooperation and time which has made these reports possible.

We trust that these reports have been helpful to you during the past season. Your comments and suggestions for improving this service would be appreciated.

NARRATIVE REVIEW

Shipments: Michigan truck shipments through March amounted to 3,573 carlot equivalents, down 12 percent compared with 4,044 carlot equivalents for the same period of the 1970-1971 season. Shipments were collected on a package basis and converted to carlot equivalents (800 50 pound sacks per carlot). Shipments by months with the past three years for comparison are carried in the body of this summary.

Production: The 1971 production of late summer onions, estimated at 21,588,000 cwt., was slightly less than 1970's production, but 8 percent more than in 1969. Yield per acre averaged 341 cwt. for the late summer states. This was a decrease of 2 percent compared with 1970's 347 cwt. per acre.

Michigan's production was estimated at 1,728,000 cwt., down 23 percent compared with 1970's 2,232,000 cwt. Yield per acre average 270 cwt., down 13 percent compared with 1970's yield of 310 cwt., and 10 percent less than 1969's yield of 300 cwt. per acre.

Acreage: Planted acreage for the Late Summer States was estimated a 65,480 acres compared with 64,030 in 1970. Harvested acreage was 63,300 acres compared with 62,250 in 1970.

Michigan planted 7,000 acres compared with 7,300 acres in 1970, a decrease of 4 percent. Harvested acreage was set at 6,400 acres down 11 percent compared with 7,200 acres harvested in 1970.

GROWING AND HARVESTING CONDITIONS: Dry weather during most of the growing season restricted size. Yield estimates were reduced monthly as the season progressed. Weather was favorable during harvest, with most of the crop harvested by October 1.

Marketing: Quality was generally good, but size was less than desirable. The first F.O.B. was issued September 7. Prices ranged from \$2.15 to \$2.25 for Yellow Onions in 50 pound new sacks graded U.S. #1 70 percent 2 inch and larger. Slightly higher prices were noted the last of September to mid October. The second week of November the market declined with prices ranging \$1.90 to \$2.10. Prices remained at this level through March 30, which was the last reporting day.

Containers: The most popular package continued to be the 3 lb bag, either mesh or film, packed 12 or 16 in master containers for shipment. 50 lb mesh sacks were second, with a small percentage packed in 1, 2, 5, 10, and 25 lb sacks.

Transportation: Trucks are used exclusively in transporting Michigan's Onions to fresh markets. The current carlot conversion factor is 800 50 lb sacks per carlot equivalent.

MICHIGAN SHIPPING POINT PRICES

Weekly price ranges contained in the tabulations below are taken from daily market reports issued from the Benton Harbor Office during the 1971-72 season. Basis of sales are F.O.B. shipping point or delivered sales shipping point basis for Yellow Globe type onions graded U.S. #1, also weekly prices paid to growers US#1 70% 2" lgr per cwt. pack-out weight basis delivered to packing sheds.

1969	19,928	13,401	1,953	4,392	185	4,577
1970	21,593	13,350	2,623	5,440	180	5,620
1971	21,568	14,115	2,231	4,711	167	4,878

1/ Utilization does not balance with late summer production or stocks because:

- (1) cold storage holdings include all onions regardless of the seasonal group
- (2) cold storage onions stored outside of late summer producing areas, and
- (3) cross-State movement of onions in some years.
