MARKETING WESTERN AND CENTRAL NEW YORK CABBAGE - 1960-61 SEASON

Daily Market Reports were issued on cabbage from the Rochester Office of the Federal-State Market News Service, 900 Jefferson Rd., Rochester 23, N. Y. from September 1, 1960 through April 3, 1961. The information in this summary was obtained from these reports and other releases issued by the Crop Reporting Board, A.M.S., U. S. Department of Agriculture and by the State Agricultural Statistician in Albany, New York

UNITED STATES

The acreage planted to cabbage this season both for fresh market and processing was estimated at 134,610, slightly higher than the acreage planted in 1959 of 128,830 acres but considerably lower than the 10-year (1949-58) average which was 147,090 acres. Yields per acre for the country during 1960 were estimated at 190 cwt. as compared with 170 cwt. in 1959, while the 10-year average was 177 cwt. Production for the United States during 1960 was estimated at 25,545,000 cwt., a slight increase over 1959 when the production was 21,852,000 cwt. but slightly lower than the 10-year (1949-58) average of 25,936,000 cwt.

The acreage planted to cabbage for sauerkraut in the United States during 1960 was considerably higher than during 1959 but slightly lower than the 10-year (1949-58) average. During 1960 the acreage was estimated at 14,000 as compared with 10,920 during 1959, while the 10-year average was 15,200 acres. Yields averaged slightly higher during 1960; 14.9 tons per acre as compared with 13.7 in 1959 and 13.3 for the 10-year average. Production for sauerkraut was considerably higher during 1960; 208,780 tons as compared with 149,770 tons in 1959, while the 10-year average was 200,600 tons.

NEW YORK STATE

The acreage planted to cabbage for fresh market and processing in Upstate New York was 14,200 acres as compared with 13,300 acres in 1959, while the 10-year average for Upstate New York was 16,850 acres. Yields per acre this season were considerably higher than either 1959 or the 10-year average; 280 cwt. as compared with 230 cwt. in 1959, while the 10-year average was 269 cwt. Production this season was estimated at 3,976,000 cwt. as compared with 3,059,000 cwt. during 1959, while the 10-year average was 4,498,000 cwt.

The acreage planted to cabbage for sauerkraut in New York State this season was estimated at 4,700 as compared with 3,600 in 1959, while the 10-year (1949-58) average was 5,400 acres. Due partly to the very favorable growing season, yields were much higher than average; 17.0 tons per acre during 1960 as compared with 13.9 during 1959 and the 10-year average of 15.3 tons per acre. Total production for kraut in the State during 1960 was estimated at 79,900 tons as compared with 50,000 tons in 1959, while the 10-year average for the State was 80,700 tons.

Growing conditions in general were much better than last season although there was a shortage of moisture in most of the producing areas in July. Heavy rains on July 30 helped the crop considerably. Sizes were mostly medium to large although some of the late planted cabbage was rather small in size. With this favorable weather many growers delayed harvest as long as possible, and some fields were harvested as late as November 1.

Holdings in storage on January 1, 1961 were estimated at 755,000 cwt. This was about five times larger than the extremely small holdings on January 1, 1960. Even though production was 30 percent larger than last year, the movement to fresh market through December was lighter. It was estimated that kraut packers utilized 60 percent more than during the 1959 season.

F.o.b. prices were considerably lower than during the preceeding year when supplies were much lighter. 50 lb. sacks of Danish and Domestic small to medium ranged from \$.70-1.25 as compared with \$1.10-3.25. Prices paid growers this season for Domestic and Danish small to medium size for fresh market ranged from \$12.00-28.00 per ton as compared with \$25.00-110.00 last year. On another page in this summary will be found weekly price ranges with comparisons. Practically all the movement this season was made by truck to terminal markets.

PROCESSING

The contract price this season for kraut was about the same as a year ago, mostly \$12.00 per ton, although in a few instances some stock was contracted as low as \$11.00. Purchases on the open market for cabbage for kraut ranged mostly from \$15.00-25.00 per ton.

NEW YORK CABBAGE STOCKS

JANUARY 1, 1961

Stocks of cabbage in producing areas of Upstate New York on January 1 were estimated at 755,000 cwt. This was about five times last year's extremely small stocks and is 38 percent higher than average January 1 stocks. Even though production was 30 percent larger than the previous fall, movement to fresh market through December has been lighter. Kraut packers utilized 60 percent more than in the 1959 season. Estimated 1960 late fall production in Virginia, North and South Carolina is 7 percent above 1959. Winter production in Florida, Texas, Arizona and California is forecast at a level 3 percent below last year. Supplies from these winter States are expected to be fairly heavy during January.
