MARKETING WESTERN NEW YORK AND PENNSYLVANIA GRAPES

SUMMARY OF THE 1937 SEASON

By

A. L. Thomas and L. D. Spink

Daily market reports on grapes were issued from the Federal-State Market News Office in Rochester from October 5 to October 29, and from the Buffalo office of the New York State Department of Agriculture and Markets from September 27 to October 29. The report from the Rochester office was issued jointly by the Bureau of Agricultural Economics, U. S. Department of Agriculture and the Bureau of Markets, New York State Department of Agriculture and Markets. The report issued from Buffalo is in cooperation with the Federal and State Bureaus of New York, Pennsylvania, and Michigan. These reports were mailed free to any one requesting them.

The material contained herein has been obtained principally from the daily reports issued at Rochester and Buffalo, statistics released from Washington, data from the Agricultural Statistician at Albany and from growers and shippers in both the Finger Lakes District and the Chautauqua-Erie Section.

The 1937 grape crop in the United States was the largest on record and was estimated to be 2,731,980 tons or 43% larger than the 1936 crop of 1,916,460 tons and 23% greater than the 5-year average of 2,214,482 tons. Growing conditions throughout the country were generally favorable although there was some damage in New York and Ohio by berry moth and some frost damage in New York.

The production in New York State this season was estimated to be 89,100 tons, which was the heaviest production since 1931, and it was about twice that of 1936 when the production reached only 49,300 tons. In Pennsylvania, the crop of 26,000 tons was also the largest since 1931 for that State, and about 4% above the 5-year average (1928-32). Production in Michigan and Ohio was also the largest in several years. California's estimated production was placed at 2,409,000 tons as compared with 1,714,000 tons in 1936 and the 5-year average (1928-32) of 1,924,000 tons.

The growing season in New York State was exceptionally good for new wood growth, and the size of berries and clusters were larger than the previous season. Unfavorable weather conditions prevailed during August, which delayed the growth to some extent and the harvesting of Concord was delayed until about October 10 in some

sections. In many cases the Concords were ready for harvest before that time, but growers delayed as long as possible in order to increase the sugar content and the coloring of the fruit. This delay in harvesting did very little good as the sugar content was reported to be the lowest in several years. An early frost did considerable damage in some sections the latter part of October. Poor quality, low sugar content and some freeze damage combined to make the quality this season considerably below the average. Because of heavier production and poor quality, prices were considerably lower than during 1936. Processing plants paid prices ranging from \$20 to \$40 per ton for U. S. No. 1 Juice Concords, with as low as \$12.50 paid for ungraded and frosted stock at the end of the season, while last season prices ranged from \$40 to \$50. Prices in both the Finger Lakes and Chautauqua-Erie Section showed a continuous decline from the beginning of the season, and the situation became so acute at about the end of the season that the Federal Surplus Commodities Corporation entered the deal and purchased 197 cars for relief purposes.

Carlot shipments for the United States were considerably heavier this year than a year ago. To January 29, the total for the country from the 1937 crop had filled 37,426 cars as compared with 31,504 for the 1936 season. New York State shipped 374 cars as compared with only 149 during 1936, Pennsylvania moved 359 cars as compared with 183 the previous season.

The twelve quart climax basket continues to be the most popular container for juice stock, although the bushel basket is still used to some extent. For table stock, the two quart baskets and the cartons containing twelve two quart baskets are still used. The long juice tray is still used for juice stock going to nearby processing plants.

PRODUCTION OF GRAPES IN THE UNITED STATES, SEASONS 1933 to 1937
