SUMMARY OF WESTERN AND CENTRAL NEW YORK ONION DEAL
SEASON 1923-24

By C. L. Brown

Market reports on Onions were issued from the Rochester office
September 28, 1923 - March 1, 1924.

It is seldom that a season opens with so much promise and closes so unsatisfactorily as the 1923-24 onion season. At the beginning of the season the crop looked fine and reports of short crops and poor quality in all of the important producing sections which compete actively with New York State naturally caused growers and shippers to look for good returns. Prices to growers started at moderate levels but began to work up rapidly until some stock was sold at \$1.70 to \$1.75 per bushel in comparison with an opening price of \$1.00 to \$1.25 per bushel. Shippers bought and stored heavily as a large percentage of the growers were willing to sell at the remunerative prices offered. However, some of the growers, and this included some of the larger growers, held their own stock.

Early shipments were heavy from New York because of the active early market, and partly because much stock was rolled to storage. September proved to be the heaviest shipping month, as well as the heaviest trading month of the season. After the market began to weaken under the pressure of liberal offerings there was a reaction against shipping as most shippers thought the price slump was temporary. While shipments from this time on were heavier than usual because of the exceptionally heavy crop it was because shippers were forced to unload their holdings and not because of any market demand.

In October it became apparent to shippers that they were paying too much for onions and buying from growers practically stopped for a short time and then started again at about the level of opening prices. Many crops changed hands and then as jobbing market prices tended to sag still further and there was no change to sell cars on a F.O.B. basis shippers stopped buying onions altogether. Very few people realized that the national onion crop was as heavy as it was until well after harvest. Shipments held at high levels and although much of the Massachusetts and Middlewestern stock was of fair to ordinary quality it nevertheless filled up the terminal markets and kept prices at low levels and very much in the buyers' favor.

The negligible f.o.b. demand during November and December forced shippers to consign and gradually brought about a lowering of their asking prices until by the middle of December shippers were quoting stock at approximately \$1.00 per 100 lb sack less than the September prices. Terminal markets were dull and draggy during this period and there was no f.o.b. buying worth mentioning. During January there was a moderate demand for a few weeks and f.o.b. selling became fairly active, much stock changing hands although there was very little advance in prices. After this little spurt in the market, buying ceased and consignments again became the rule with f.o.b. sales the exception. From that time on the asking prices gradually declined in sympathy with the weak terminal markets.

National shipments ran heavy even from the start of the season, and after the early fall months they were above the average of the last two seasons. The New York state crop was heavier than usual but it was not sufficient in itself to cause low prices. As with many other crops it is the national situation which governs. Had the national crop been short the heavy New York crop could have been marketed profitably.

One unusual feature of this season was the shortage of good red onions and the high prices they commanded. During January a number of cars of reds were sold f.o.b. at prices ranging from \$3.00 to \$3.35 per 100 lb sacks for good medium to large stock which was \$.50 - 1.00 higher than the price for yellows. The few cars of reds remaining in New York were cleaned up during the January market activity.

Quality

The quality was generally good to excellent. The season was favorable for harvesting operations and the crop was well matured and well dried so that it had excellent ^{condition} quality. The size was good and the percentage of the larger sizes was high where the previous season it had been low.

Distribution

New York and Philadelphia are the leading markets for New York onions but New England towns, particularly Boston, bought heavily the past season. Very few cars went to Ohio markets or to Pittsburgh. Baltimore and Richmond took quite a number of cars. The distribution to the west was cut off by a heavy supply of middlewestern onions in local markets but this was equalized by the good market in New England.

Weekly Jobbing Range of New York State Yellow Onions in 100 lb sacks
