MARKETING WESTERN AND CENTRAL NEW YORK POTATOES 1966-67 SEASON

Daily Market Reports on potatoes were issued from the Rochester office of the Federal-State Market News Service from September 12, 1966 through April 27, 1967. Information for this Summary was obtained from these reports and releases by the U.S. Department of Agriculture and the New York State Crop Reporting Service, Albany, New York.

NEW YORK STATE

Cool, wet weather prevailed over the State during April and the first half of May. Plantings were delayed in all sections. During the latter part of May, cool dry weather moved into the State and all western section growers took full advantage to finish planting. It was mid-June before temperatures reached average summer norms and the crop got off to a slow start.

The latter part of June and most of July were hot and dry and the crop made good progress. In general, August temperatures were about normal and rainfall was abundant. September rainfall was above normal and the agricultural drought was terminated in all Upstate sections. Tubers put on good size late in the growing season and the crop turned out to be slightly larger than last year but smaller than the 1959-63 average.

Harvesting proceeded slowly in early September and was hampered by frequent heavy rains. Volume digging commenced during the latter half of September and continued through most of October. Harvesting was slow chiefly account wet fields and labor shortages.

Shipping point prices started the season ahead of last year and held a slight lead through January. During February, prices reversed the earlier trend and sold slightly under the preceding year. Sagging prices in March were more pronounced and were uniformly lower than last year. April prices continued to drop and ended the season .75-\$1.00 lower than for comparative dates last year.

Shippers price to growers showed much better by comparison and detailed weekly averages for both years are shown on page 2 of this summary.

POTATOES FOR PROCESSING

In Steuben and Wyoming Counties, early season diggings of potatoes for processing showed disappointing yields. Harvesting was in full swing after mid-September and yields generally showed substantial improvement. A serious truck shortage developed late in September and haulings declined for the next two weeks.

Harvest reached the halfway mark around the middle of October and labor shortages began to slow all field operations. Good weather favored harvesting with the result that available crews were able to concentrate on progressively fewer undng fields. Practically all the crop was harvested and digging was finished by the last of October.

According to normal trade buying, haulings declined during the latter part of October and most stock moved to storage. Color improvement was slow and variable. Good white chipping color offerings remained tight most of the marketing season. Shippers price to growers, bulk per hundredweight ranged from \$3.00 for best white color down to \$2.00 for fair color lots.

\* \* \* \* \*

Comparative acreage, yield and production totals with comparisons, for all chief producing states are shown on page 4.

A further breakdown of acreage, yield and production by seasonal group states with comparisons, is shown in detail on pages 5 and 6.

WEEKLY PRICE RANGE OF POTATOES AT WESTERN AND CENTRAL NEW YORK SHIPPING POINTS
